Dear Sirs:

It is our opinion that the apparent attempt to speed up the licensing of Diablo Canyon Nuclear Power Plant is inappropriate. My wife and I are very concerned about many issues involving the use of nuclear power. Our prime concerns about this particular plant involve its location, less than three miles from an active fault, and the lack of an adequate emergency plan.

Your review of this plant's location and the serious hazard to residents of this county would be appreciated.

Thank you.

Sincerely,

Robert Stone

Dear Mr. Hendrie:

There are still too many unanswered questions regarding the Diablo Canyon Nuclear Power Plant, which is the reason for this letter. I live approximately fifteen miles downwind from the plant, and am very concerned.

There is no evacuation plan at the present time for this area. The roads leading in and out are narrow, and even Highway 101 is only two lanes in either direction. Public transportation is almost non-existent, and there are many low-income families and senior citizens in the area who do not own cars.

And there is the Hosgri Fault, less than three miles from Diablo. I am a native Californian, and have experienced many earthquakes, destructive much further away from the faults than three miles. Earthquakes are still not predictable to any great degree as to time and strength, and just how fast could Diablo be shut down if one was predicted, or occurred?

Where will the nuclear waste be stored, and just how radiation-leak-proof will the storage containers be? And how will this waste be transported - past homes and schools in the area?

These, plus the long-term effects of low-level radioactive emissions, are my major concerns. I strongly urge that a public hearing be held in this area on this matter.

Thank you for reading this letter.

Sincerely,

Barry Meyers

Dear Mr. Hendrie:

There are still too many unanswered questions regarding the Diablo Canyon Nuclear Power Plant, which is the reason for this letter to you. I live approximately twelve miles downwind from this plant, and am very concerned.

There is no evacuation plan at the present time for this area. The roads leading in and out are narrow, and even U.S. Highway 101 is only two lanes in either direction. Public transportation is practically nil, and there are a great many low-income families in the area who do not own cars.

Also - what about the Hosgri Fault? I am a native Californian, and have experienced many earthquakes, destructive even at some distance from the faults themselves. Earthquakes are still not predictable to any great degree as to time and strength, and just how fast could Diablo be shut down if one was predicted, or did occur?

Where will the nuclear waste be stored, and just how radiation-leak-proof will the storage containers be? And how will this waste be transported? Diablo Canyon has just one way in and out, and then it's over Highway 101, and/or past homes and schools.

These, plus the long-term effects of low-level radioactive emissions, are my major concerns. I strongly urge that a public hearing be held in this area to answer all questions.

Thank you for reading this letter.

Sincerely,

Kenneth N. Shryock

Dear Mr. Hendrie:

I am a long-time resident of San Luis Obispo, a parent, state employee, and homeowner. I have lived in several other areas in California and have decided that this community is where I want to live and work and raise my child.

However, the Diablo Canyon Nuclear Power Plant may change all that if it is licensed to operate. I am fearful of the negative effects of daily low-level emissions on our health and agriculture, and I am extremely fearful of a nuclear catastrophe in the event of an earthquake.

A lot of other issues pertaining to the operation of Diablo concern me such as the lack of an effective emergency evacuation plan; the unresolved question of where/how to store toxic wastes from the plant; the questionable plant security against terrorist threats; and the high cost and danger of decommissioning Diablo.

I urge you to consider these important questions yet to be resolved in the case of Diablo, and I urge you to conduct investigations and hearings necessary to obtain all the facts.

Sincerely

Charly Beam

Dear Mr. Hendrie:

There are still too many unanswered questions regarding the Diablo Canyon Nuclear Power Plant - this is the main reason for this letter to you.

I live approximately twelve miles downwind from this plant, and as yet there is no proof of the total safety of this plant. I know you will say there is no total safety in anything; but why deliberately test this theory?

There is no evacuation plan at the present time for this area. I work with preschool children in the Headstart program, and I know for a fact that should an accident occur, even at low-level testing, many of these children and their families would have no way of getting out of the area.

Also - what about that Hosgri Fault? I am a native Californian, and have experienced many earthquakes, with vivid memories of destruction at some distances from the center of the quake. Earthquakes, as I'm sure you know, are still not predictable to any great degree as to time and strength, and just how fast could Diablo be shut down if one was predicted, or did occur?

Nuclear waste - where will it be stored, and just how radiation-escape-proof will the storage containers be? And how will this waste be transported? There is just one way in and out of Diablo, either over a major U.S. highway, and/or past homes and schools.

These are my major concerns - plus the long-term effects of low-level radioactive emissions. I strongly believe that a public hearing should be held IN THIS AREA to answer all questions.

Thank you for reading this letter.

Sincerely,

Louise Kadau

Dear Mr. Hendrie:

Ever since the first shovelfull of dirt was tossed up concerned citizens have asked "what will become of the toxic waste from the Diablo P G & E beneath that is being constructed." NO ANSWER in all these years!

There are so many dangerous issues that must be considered: emergency planning, Hosgri Fault, plant security, cost of decommissioning, what type of insurance will cover a possible Three Mile Island type of disaster and who will pay for it.

Recent pro-nuclear activity basically changes nothing.

I join in the request that a public hearing be held before a low power license to operate is granted to Diablo.

Yours truly,

DOROTHY E. WOOLPERT

Mr. Joseph Hendrie,

March 30, 1981

As a resident of San Luis Obispo county I am extremely concerned about the existence of the Diablo Canyon Nuclear Power Plant. I realize our need for energy, but at the same time I have a not unreasonable desire to live in as safe an environment as possible. The hazards that Diablo Canyon now present clearly outweigh the benefits of its energy production. The fact that these hazards may become a reality without a public hearing is unforgivable.

Thank you for your time.

Sincerely,
Lynn M. Roberts
