

MR. Wolf

6/1/81

I attended the Diablo Canyon hearings in San Luis Obispo in May. I am very concerned that because of the quality of testimony and answers that P.G.E. gave were somewhat below the Califorma that I would expect from experts dealing with a Nuclear plant and evacuation procedures. It is obvious that the plant officials and equipment are not ready to even handle low power testing. I was apalled by the lack of concern over public safety measures and really apalled by the fact that real time monitors are not monitored from within the plant. Are evacuation crews ready to handle radiation victims? Who will handle what? I was apparent that P.G.E. and officials are not ready to deal with major problems. I am a concerned citizen who lives 100 miles down wind as I noticed the real time monitors operating now are in a North, south orientation.

— I don't want to pay for another
Three mile Island with my taxes or with
life. I would rather pay to have
Diablo Canyon not operate. Nuclear
plants are a menace to any neighbor-
hood and are subject to terrorist
raids, As they are military support
elements i.e. plutonium producers.

A Nuclear Plant next to an active
fault? That has got to be someones
idea of a deadly joke. Please don't
grant this license on grounds of seismic
and public safety.
