Re: Docket No. 50-275
Docket No. 50-323
Diablo Canyon Units 1 and 2
Generic Concerns

Dear Mr. Miraglia:

The following actions have been taken by Pacific Gas and Electric Company regarding generic concerns:

Ganged Reopening of Valves - Design modifications were issued to revise the containment isolation provisions of the liquid radwaste valves (nine in total) such that ganged reopening can no longer result from a single operator action after the signal has been reset. These modifications have been implemented.

Minimum Containment Pressure Setpoint - The justification for maintaining the minimum containment pressure setpoint at 3 psig was submitted in my letter to you dated June 17, 1981.

Additional Information, Vacuum/Overpressure Relief Valves - A review of the system's operation reveals that at this time we see no need to have to operate with these valves more than 50 degrees opened. We will continue to operate with these valves blocked at no more than 50 degrees open. Therefore, we believe no tests or analyses are needed.

Boo
1/0

Very truly yours,

Philip A. Crane
