NOT JONES MESOCATE STAPP DIRACTOP

ł,

CHE MC BLYNN BDIRNL COUNSEL

REVOLCAR COLARGE

The Honorable Hunsio J. Palladino Chairman U.S. Huclear Regulatory Commission 1717 H Street, M.W. Washington, D.C. 20555

Dear Mr. Chairman:

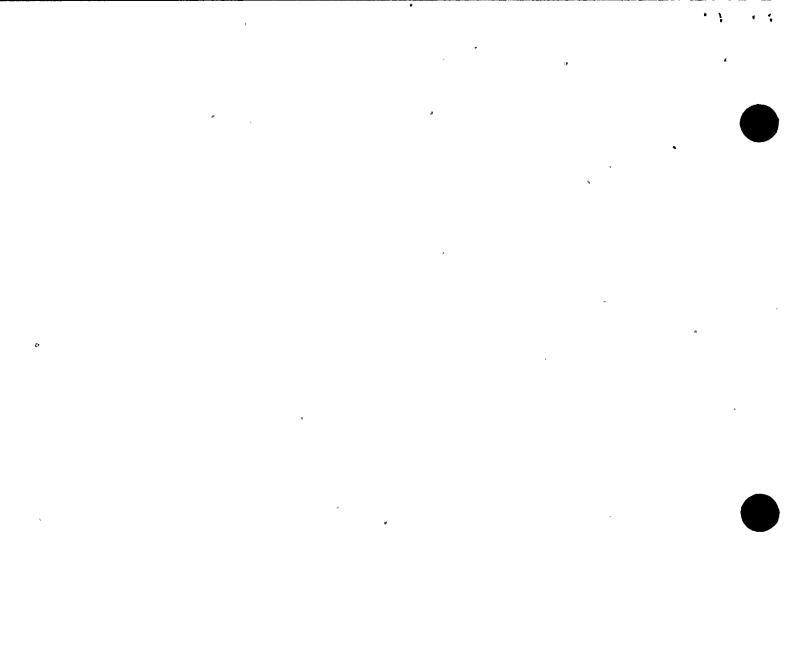

On Septeber 21, 1983, I wrote to you regarding my concern that draft reports concerning quality assurance at nuclear plants under onstruction had been shared with licensees. My letter noted that in the case, Diablo Canyon, the licensee was asked to comment on the draft report and was told by the MRC staff that any comments would be considered in connection with finalizing the report.

In your October 7, 1983 response you enclosed a copy of Pacific Gas and Electric's (PG&E) September 21, 1983 comments on the draft report and a "revised draft working paper" dated September 19, 1983. The September 27, 1983 cover le ter to the revised (and final) draft report states that "...it does not reflect licensee comments on the July 19 draft."

The original draft report, dated July 19, 1983, that was provided to PGSE for "review" purposes criticized PGSE's quality assurance efforts in blunt, uncompromising terms. In PGSE's September 21, 1983 letter to the NRC, it rejected much of the criticism. The final report contains few of the draft report's strongly negative conclusions and those which remain are couched in less critical language. These circumstances are documented in the enclosed chart, "Changes From Draft to Final Case Study C Which Resulted in More Positive or Negative Treatment of the Licensee," prepared by one of the parties to the Diablo Canyon proceeding and furnished to the Subcommittee.

According to this enclosure, there are literally dozens of instances of changes that have been made to the final report. Of far greater concern is the fact that changes in the final report, despite the isclaimer in the September 27 cover letter, appear to cater to the concerns expressed in PG4E's September 21, 1983 letter. A large number of altered or deleted statements correspond to PG4E's criticisms of the draft report. Furthermore, virtually no change

•

я

The Honorable Nunzio J. Palladino vember 1, 1983 ge 2

that appeared in the final report portrayed PG&E in less favorable light than in the draft.

While I have not reviewed it in detail, the circumstantial evidence documented in the enclosed chart would appear to indicate that PG&E's. comments were in some way communicated to those who revised the draft. Even if this were not the case, it is disturbing to me that virtually all the changes between the draft and final report had the effect of treating the licensee more lemiently.

As I stated in my original letter to you on this subject, the NRC's practice of sharing draft reports to licensees under scrutiny has the potential of compromising the agency's objectivity. At the very least it has led to the appearance of impropriety in this particular case. I believe that the changes made in the preparation of the final report warrant a full investigation. Specifically, I would like to know why the draft report was consistently altered to reflect more favorably on the licensee and whether the licensee's comments were seen by, or otherwise communciated to, those who revised the report. Additionally, I would like to be provided as soon as possible with all edited or "marked up" copies of the original draft, ogether with the identity of the individual or organization that uggested the change.

÷

Thank you for your attention to this matter.

Sincerely,

EDWARD J. MARKEY Chairman, Subcommittee on Oversight and Investigations

Enclosure EJM:ibm

- The Case C nuclear station would be its only nuclear capability in the near term. (p.6)
- Control of Purchased Material, Equipment, and Services [was deficient]. (p.8)
- 5. These factors include . . . an atmosphere of contention between engineering and quality assurance. (p.9)
- 6. As a facility nears completion or is in a prestartup condition (as the Licensee's station was in the mid-1970s) and new or changed requirements arise, there is an ever present tendency to shortcut procedures and to formalize action later. Such conditions increase the possibility of error. (p.9)
- 7. The Licensee and its consultants and contractors were just far enough removed from the customary level of informality to promote the possibility of error and misunderstanding. (p.10)

Control of Service Contracts [was deficient]. (p.8)

These factors include ... the resistance by engineering of the application of formal quality assurance procedures. (p.9)

As a facility nears completion or is in a prostartup condition (as the Licensee's station was in the mid-1970s) and new or changed requirements arise, there is a tendency to accomplish the activity and to formalize action later. Such conditions, coupled with informal interface procedures, increase possibility of error. (p.9)

Deleted (p.10)

	Draft Languag <del>e</del>	Final " Language	Page Refernce in PGGE Letter
8.	While the Case Study Team was unable to establish the attitudes and relation- ships between engineering and the new quality assurance director in 1977, it is suspected that the relationship was something less than con- structive (The new quality assurance director was reassigned in February 1979). (p.12)	The case study team was unable to establish the attitudes and relation- ships between engineering and the new quality assurance director during those years [late 1976 and 1977]. (p.12)	
9.	The Liconsee had a false sense of security with respect to its engineering capability. (p.12)	The Licensee had a high degree of confidence with respect to its engineer- ing capability. (p.12)	5.
	Further, and as previously stated, the Licensee was within a few months of bringing the plant on line on several occasions. Thus, actions that the Licensee might take in a longer run would be dif- ferent when it appears that project completion would be imminent, and no nuclear plants were anti- cipated in the near term. (p.13)	Deleted (p.13)	5
11.	The Licensee's past exper- ience with construction enabled them to proceed with the necessary controls in place and qualified people to keep them that way. Construction of power plants was "old hat" and they knew how to stay out of trouble and get the job done. New OA/OC requirements were	Deleted (p.13)	
	QA/QC requirements were accommodated [referring to the Licensee's "failure to understand and appreciate the potential merit of a formal QA program"]. (p.14)	•	•

- 12. There was no great experience in seismic matters in the Licensee's organization, and there was no detailed scope of the work that the Licensee specified for its consultants. (p.15)
- 13. He [the Licensee's Vice President of Engineering] said these things were good for his staff to experience and it will be better for it when the project is completed. (Re commented on a number. of problems, mostly personnel related, that had arisen as a result of this integrated matrix organisation [the Project Completion Team]). [p.17]
- 14. In the past, he [the Licensee's Nanager of Nuclear Power Operations] said, there had been much wheel reinventing. They started with a few of the required procedures and then flooded the place with records without having people to take care of them. The QA guidelines had seemed to restrict the conduct of assuring quality and, thus, it was resisted. (p.17)
- 15. The fact that the Project Completion Team adopted the A-E's quality assurance program is indicative of the Licensee's lack of understanding (or perhaps procedures) of how to apply quality to the design/ construction process for nuclear plants. (p.19)

He said these things were good for the staff to experience and it will be better for it when the project is completed. (p.16)

Deleted (p.16)

The fact that the Project Completion Team adopted the A-E's quality assurance program may be indicative of the judgment that the Licensee's methods of applying QA to the design process for nuclear plants needed improvement. (p.18) 8

	There is evidence that this is one area [clearly defined and properly implemented responsibility and authority] that was very weak in the early stages, and is one of the reasons for the Licensee's present predicament. There are no observations for the present organiza- tion, other than they aro aware that this should have been more formal in the early program. The Licensee's former GA manager made the statement that the early requirements for responsibilities were left to the organization responsible for work. This was a general con- census. Everybody sup- posedly understands the requirements, but chose to take care of his own res- ponsibilities. (p.A-3)	There are no observa- tions for the present organization; the licensee is aware that engineering CA should have been more formal in the early program. (p.A-2)	11
28.	The Licensee did not understand the need for trained quality people in the beginning. Many people were put into quality functions without training. The Engineering Manager's philosophy is that the people responsi- ble for the task are the only ones capable of really getting it done. He refuses to accept an independent organization watching his activities. He dodsn't understand the concept. In fact, the opposite of quality manage- ment seems to have happened. The Corporate QA Manager does not appear to be	The Licensee apparently did not fully appreciate the importance of staff- ing with experienced QA personnel in the beginning (p.A-3)	11
