GE Magne-Blast Circuit Breakers - Corrective Action

Dear Mr. Knighton:

Pacific Gas and Electric Company (PGandE) reported in LER-84-006, dated March 19, 1984 (DCL-84-105), malfunctions experienced by GE Magne-Blast circuit breakers during their testings. The cause of the malfunction was determined to be excessive wear in the Teflon-coated fiberglass sleeve bearing used in the mechanical actuator.

PGandE has performed all corrective actions noted in the subject LER relating to 4.16 KV breakers serving vital loads. These included development of supplemental maintenance procedures for inspection and overhaul, repair of all subject breakers including replacement of Teflon-coated fiberglass bearings with aluminum bronze sleeve bearings, and functional testing to confirm operability.

This letter constitutes a notification of completion of all of the above actions.

Kindly acknowledge receipt of this material on the enclosed copy of this letter and return it in the enclosed addressed envelope.

Sincerely,

J. O. Schuyler
