Director
Nuclear Regulatory Commission
Washington, D. C.

Dear Sir:

I would like to plead with you not to give Pacific Gas and Electric the permission they asked for yesterday to start operating their Diablo Canyon Nuclear Plant without their final license. In the first place this would be a dangerous precedent. More important, I do not believe that any licenses should be granted until the Three Mile Island Report has shown all the requirements necessary for more safety in nuclear plants.

In the case of Diablo Canyon I do not feel that all conditions of danger have yet been taken into consideration. We moved here a month ago; just a few days ago I saw pictures of the plant for the first time. Knowing the history of slides and slumping along the coast of Southern California I was horrified to see how close to the beach cliffs it is located as well as being close to a small canyon perpendicular to the shoreline. Obviously some of the cliff the cliff has been disturbed also for one of the smaller structures. I had meant to look up the geology of this particular area before writing but P.G.&E's action does not give me time. I'm sure that you can get the information from the U. S. Geological Survey. If there is the same sandstone, siltstone and shale underneath these buildings that there is under most of the coastal area, then the danger of this plant sliding towards or into the ocean with the accompanying disaster if the plant is in operation is far greater than the danger from an earthquake. I plan to write again after I have looked into this matter further.

I am against any nuclear plant at least until a satisfactory method of waste disposal is found; but I am particularly against them in California. California is in a unique situation found no place else in the world today. Perhaps there has never been one like it. It is located on the leading edge of a continental plate which is overriding a mid-ocean ridge of molten rock coming up from great depths one side of which is trying to push California back to the east. Geologists do not know what is going to happen but know that this is the reason for the tremendous number of faults.

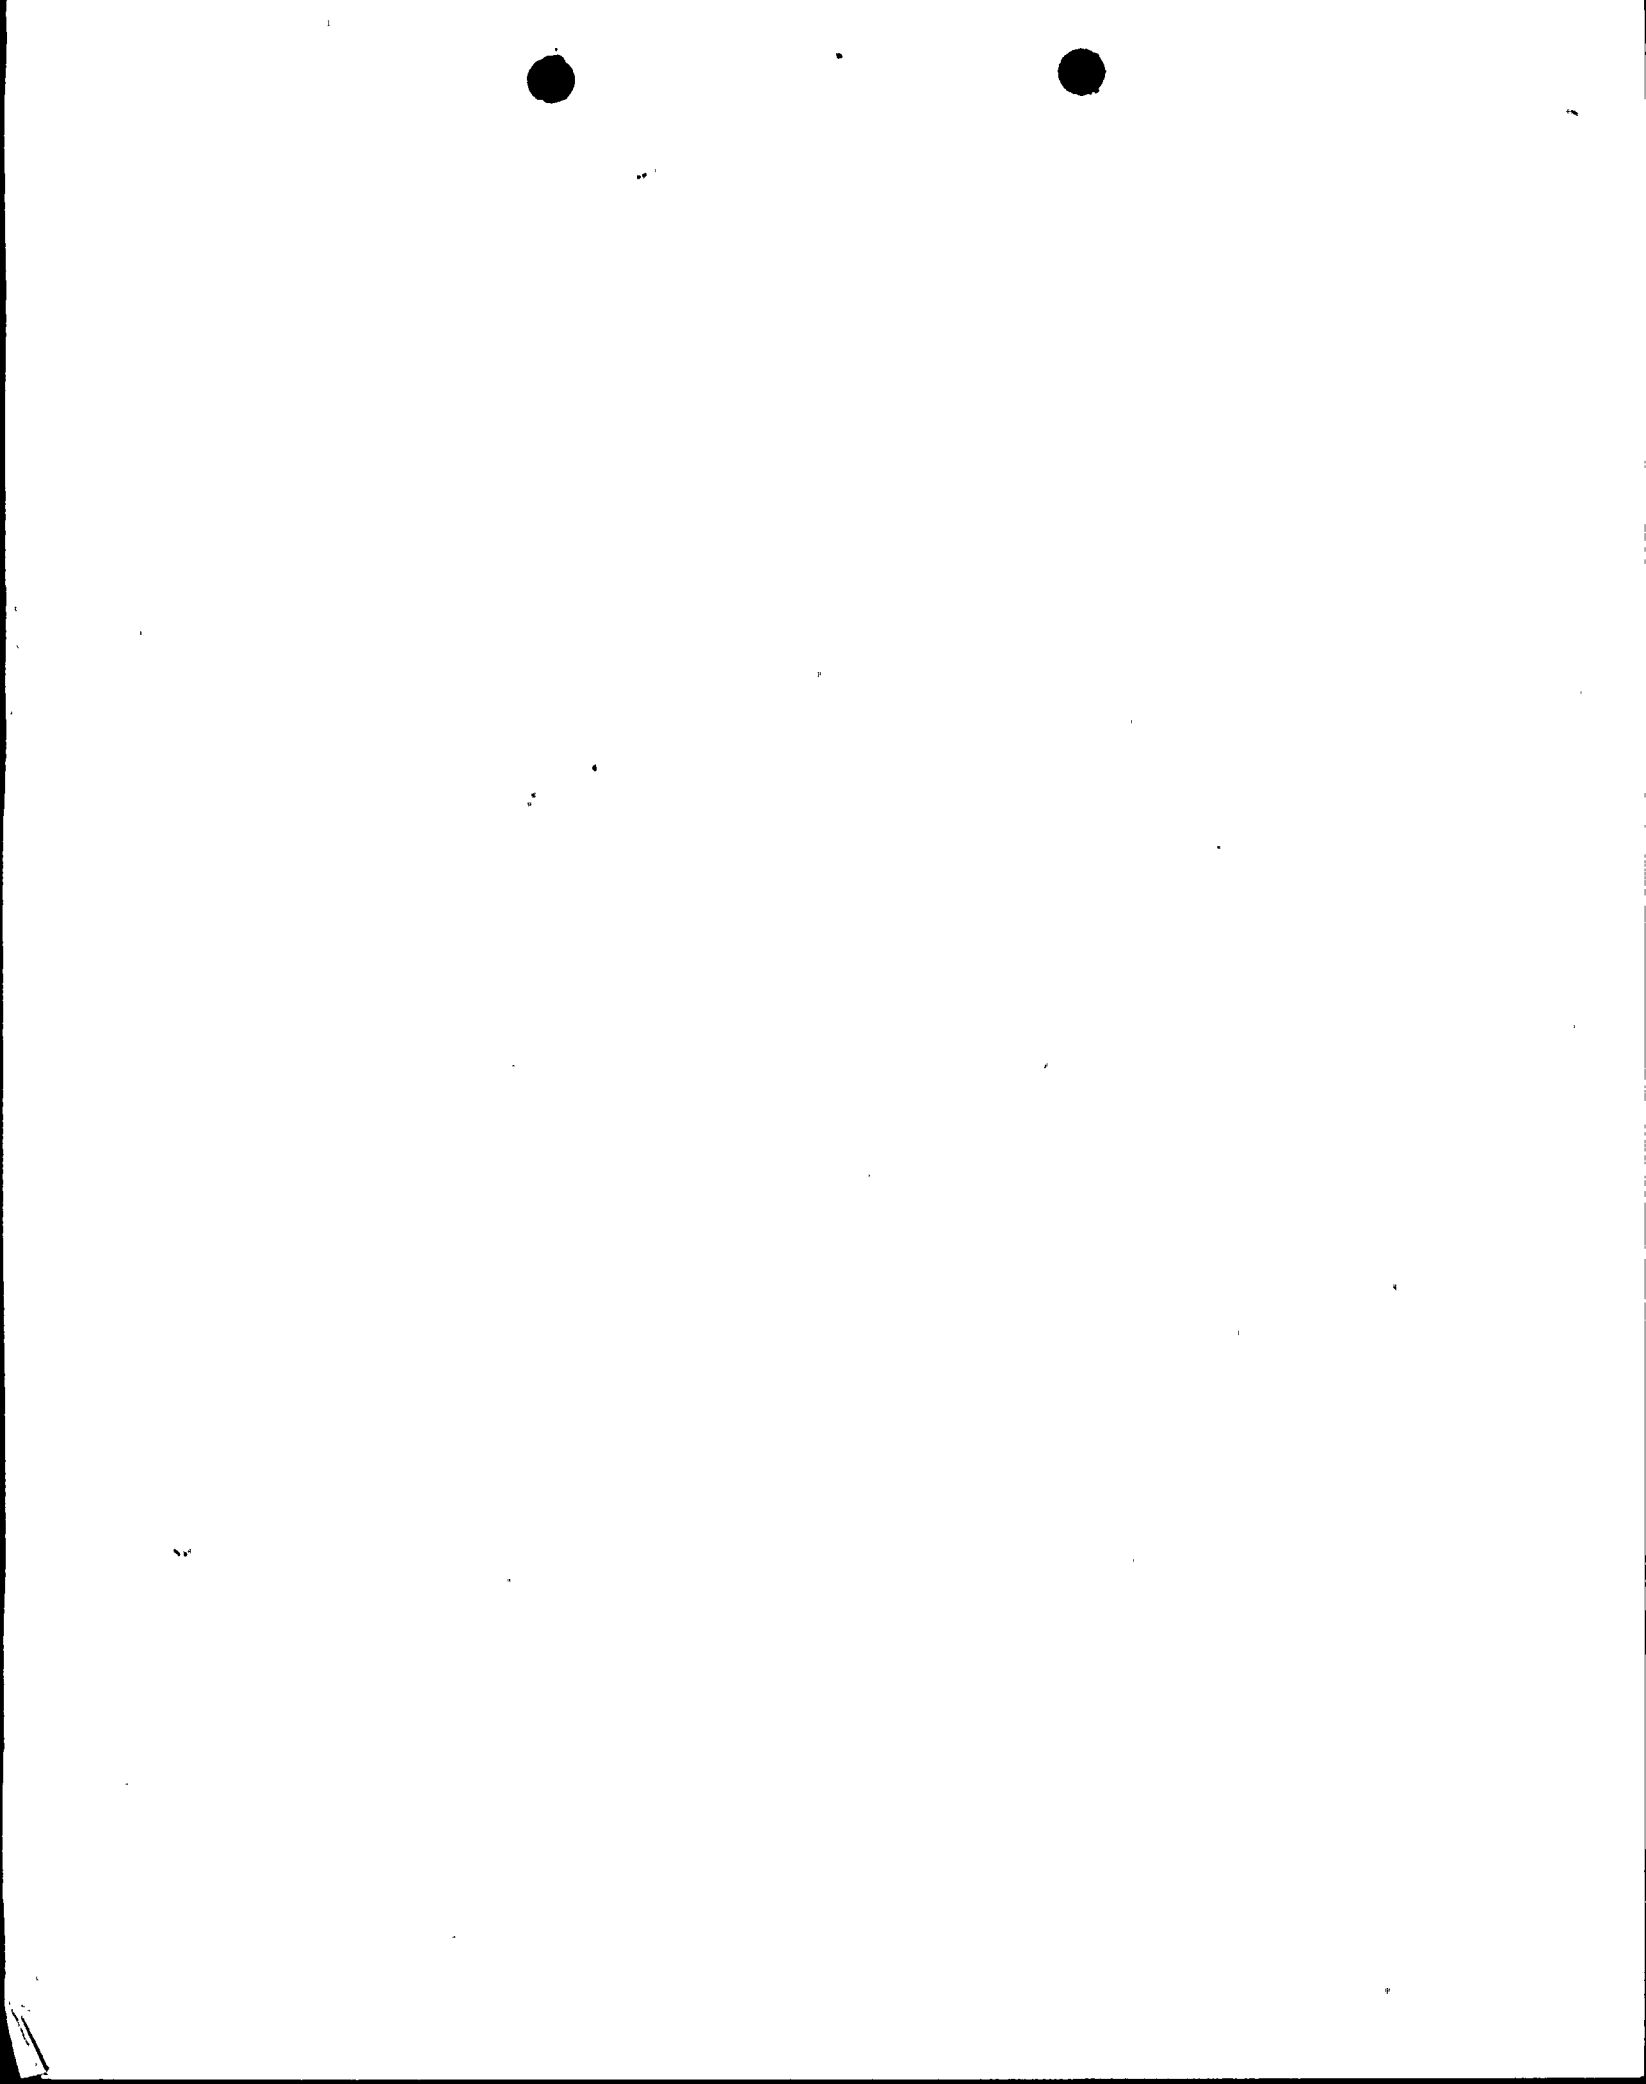

I have not seen either of these matters brought up in discussions of the safety of Diablo Canyon Nuclear plant and feel strongly that they should be before a licensing decision is made.

Sincerely,

Connie Snapp

E. W. MORRIS

10025 EL CAMINO REAL, NO. 30
ATASCADERO, CALIF. 93422

March 10, 1980

Mr. John Ahearne, Chairman
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Ahearne:

There are some seven nuclear plants ready for testing and operation now in the United States. One of these is the Diablo Canyon Plant of Pacific Gas and Electric Company, with two 1140 Mw. units.

Last year the reserve margin on the PG&E system was reduced to less than 5%, in spite of available interconnections to the Pacific transmission systems.

With the expected increase of 3 or 4 percent in the 1980 peak, we will be in the area of brown outs and black outs unless Diablo Canyon units are made available within one or two months.

The equipment is sitting there ready for testing and operation at low power.

As a concerned citizen I ask you to please release the hold on licensing this plant for operation.

Your Appeals Board which is scheduled to meet in San Luis Obispo, CA on April 2-3 will be deluged with complaints from a minority of obstructionists whose only object is to delay operation of the plant. It is apparent they have reconciled themselves to the fact that the plant will operate, and that all they can do is to create delays. Most of these opposers are imported merely for the purpose of such demonstrations.

In 1976, when California voted on Proposition 15 (The anti-nuclear initiative) residents of San Luis Obispo County voted 68/32 against the initiative, greater than the State vote of 65/35.

Thank You

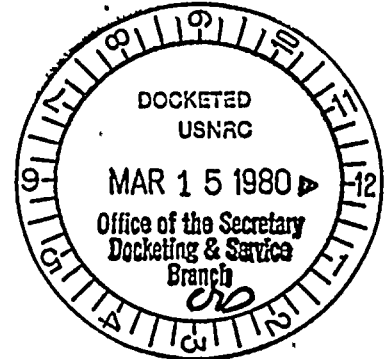

Edwin W. Morris
Life Fellow IEEE
53 years of active service in the
electrical industry

I live 25 airline miles from Diablo.

March 10, 1980

Mr. John Ahearne, Chairman
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Ahearne:

I am writing to urge the licensing of Nuclear Power Plants, particularly those ready or near ready for operation. The most urgent need is for Diablo Canyon. California is particularly short of power reserves thanks to your delays and those of the State Energy Commission. Power reserves last summer in California were below 5% which is just too slim a margin to assure reliable energy.

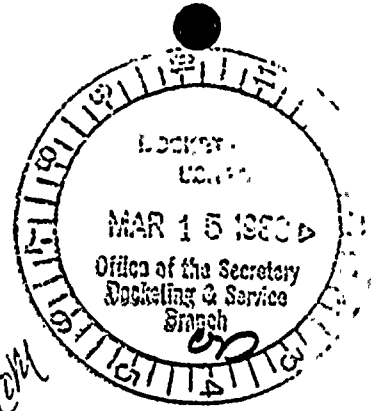

Please act.

Very truly yours,

Oscar D. Terrell

DOCKET NUMBER 50-275,323
PR & UTIL. FAC.

The Honorable Robert J. Lagomarsino
Member of Congress
1117 Longworth Bldg.
Washington, D.C. 20515

Dear Sir:

The enclosed clipping from the San Luis Obispo County Telegram-Tribune for Friday, February 22, 1980, illustrates a situation that I believe is intolerable.

First, let me say I am not opposed to nuclear power development since I have worked on problems related to peaceful uses of the atom, and I am not afraid of it. Just respectful.

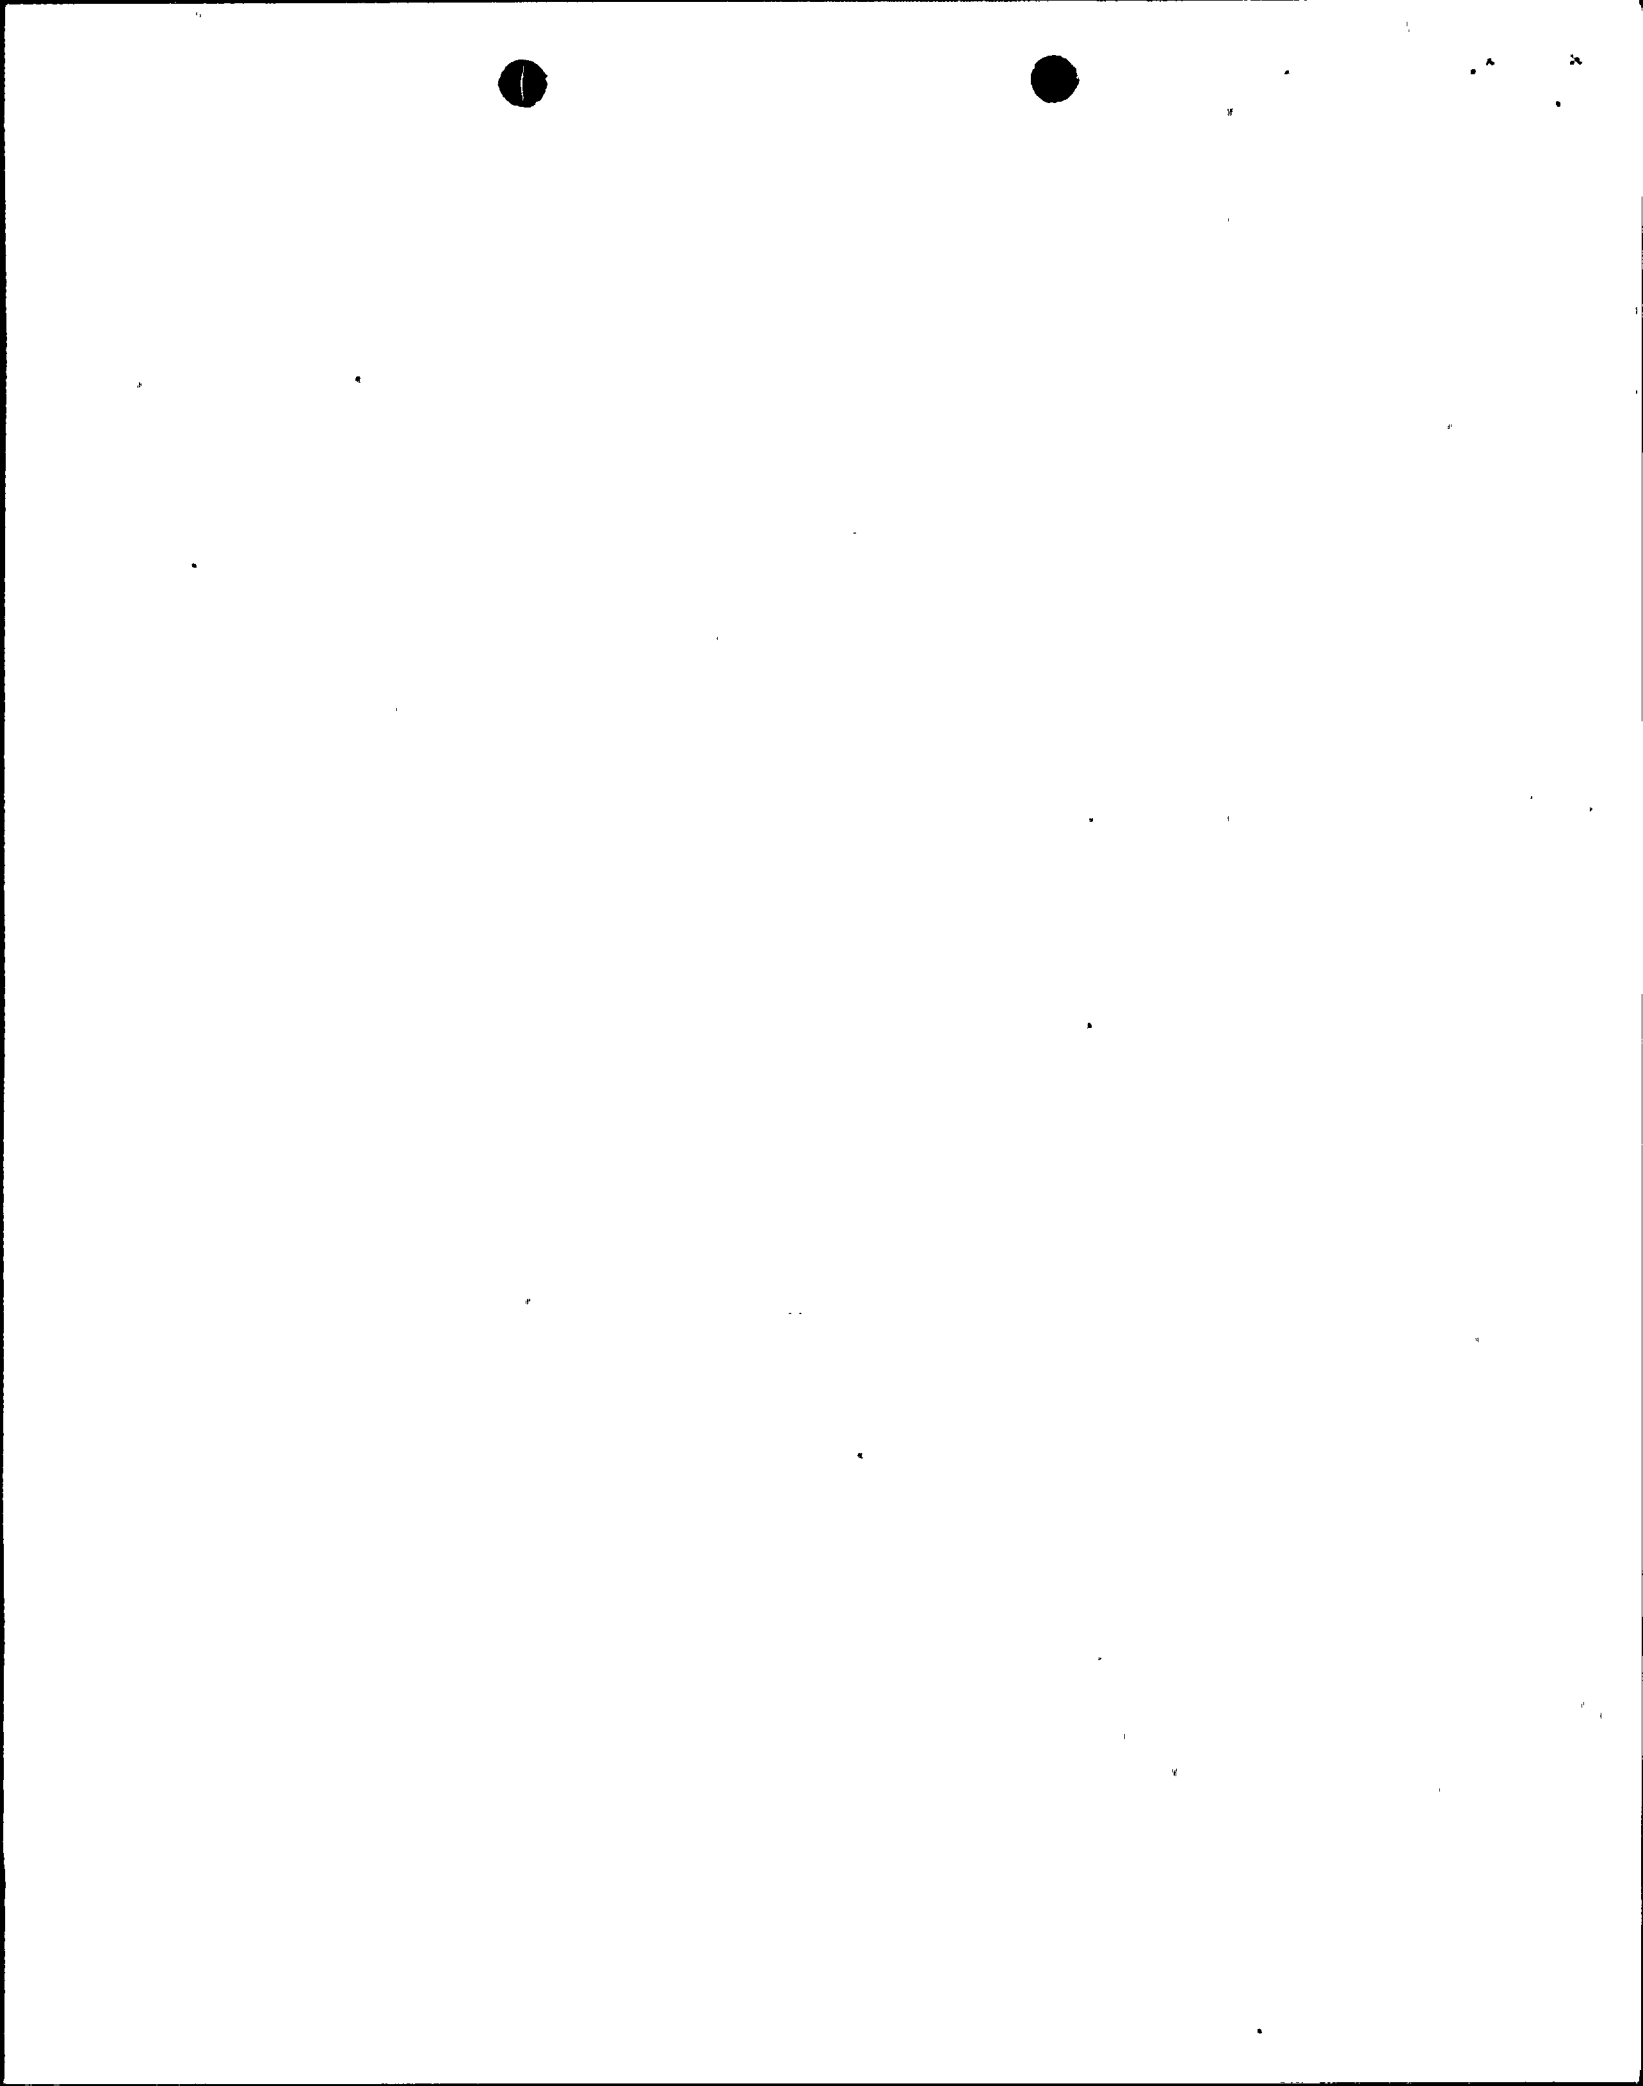

However, in too many instances, the Nuclear Regulatory Commission, (NRC) and its parent organization, the Department of Energy (DOE), have acted at considerably less than the deserved level of expertise.

The opponents of nuclear power, listed in the second clipping, are well-organized and very well advised by expensive counsel. The "goofs" by the responsible government agencies have been grist for the opponent's mill and have furnished a basis for extended litigation against the agencies and the owner of the Diablo Canyon plant, Pacific Gas and Electric Company. This litigation has caused a large increase in plant cost.

Technically, I know the opponents do not have a good case, but by expert use of the poor showing by NRC, the licensing board, and DOE, the "intervenors" have been effective in confusing the public and leaving a sense of frustration in those who support the development.

Please use your good offices to convey my dissatisfaction to the agencies responsible for the unconscionable delays in the design, construction, inspection, and approval of nuclear plants.

The same criticism can be leveled at the agencies for their incredibly poor handling of the "Three Mile Island" incident. Newspaper reporters and TV newscasters have successfully made the "incident" into a real disaster and created a negative "buzz-word" to the delight of nuclear opponents; and also, to many, "China Syndrome" correctly reflected the TMI "disaster".

WILLIAM H. McDILL

Page two of two

Representative Robert J. Lagomasino--

I believe, as a taxpayer, voter, and professional engineer (retired), too often the responsible government agencies fall woefully short in ability to handle the jobs placed in their hands by the Congress. Yes, the Executive Branch is in charge of these agencies, but Congress fails in its duty in properly writing legislation that sets up authority and responsibility. The first failure is in limiting the authority of the agencies; the second, is the uncertain definition of responsibility, particularly to expeditious prosecution of the permit process. The agencies lack a sense of urgency and appreciation for the cost to applicants of delays and diversions, especially by those who oppose worthy efforts by properly qualified suppliers of energy, both public and private.

Further, I see a distinct loss in credibility in government agencies from the days of "can do" and "will do" in 1942-1950 to the present when the agencies say "we will see" and "we may try", knowing full well that the life of the agency depends more on not doing than on doing.

Respectfully submitted,

William H. McDill

①

Don't just take their word for it

The fact that a Nuclear Regulatory Commission licensing board didn't bother to read Pacific Gas and Electric Company's plan for security at the Diablo Canyon nuclear plant before approving the plan is appalling.

The NRC was established by Congress to safeguard the public interest as far as nuclear power plants are concerned.

It is very much in the public interest for a nuclear plant to have a plan which would thwart saboteurs and/or crazies.

When PG&E's plan came before the licensing board, the board listened to PG&E officials describe the plan as adequate, asked no questions and approved the plan lock, stock and reactor.

So much for the public interest.

Fortunately, a NRC appeals board decided Friday that the licensing board was off-base and rejected the

licensing board's approval.

With the rejection, the appeals board observed that portions of the PG&E plan appear to violate NRC regulations.

The appeals board will conduct new hearings regarding the security plan for Diablo Canyon. It's to be hoped that the appeals board will adopt a "show me" posture regarding the plan and not take PG&E's word that everything is hunky-dory.

PG&E also is telling us and the NRC that the plant, which is three miles from an earthquake fault, will be safe should there be an earthquake.

As with the security plan, the public and the federal government should not accept PG&E's seismic safety report without scrutiny and questions.

The licensing board botched it with the security plan.

Another such bungle would be inexcusable.

SAN LUIS OBISPO COUNTY TELEGRAM-TRIBUNE Fri 2/22/80

② Nuclear rule loopholes charged

Proposed federal regulations for dealing with nuclear emergencies contain too many loopholes for the benefit of power plant operators, a coalition of 12 San Luis Obispo County anti-nuclear groups has charged.

In a letter to the Nuclear Regulatory Commission released Thursday, the San Luis Obispo Area Task Force on Nuclear Power Issues said the proposed regulations were "a step in the right direction, but they do not adequately protect the public."

The regulations would require nuclear power plants to have emergency plans for anyone living within 10 miles of each plant. The NRC could suspend the license of any plant without such plans.

The task force response, signed by Robert E. Griffin of the Sierra Club, proposed that the plans cover people living within 100 miles of nuclear

plants.

It said that the NRC should require the plans to be implemented; if they aren't, it said, suspension of plant licenses should be mandatory.

Members of the coalition include the Santa Lucia chapter of the Sierra Club, San Luis Obispo Mothers for Peace, Concerned Citizens of San Luis Obispo, South County Voters Against Diablo, People Generating Energy, Citizens Opposing Radioactive Cayucos, Concerned Citizens of San Luis Obispo, Seaside Survival Group, Concerned Citizens of Shell Beach, Solid Rock of Morro Bay, Oak Tree Alliance and Concerned Architects of San Luis Obispo.

The coalition chided the NRC for being more concerned about how much emergency plans will cost power plant operators than about public safety.

In response to an NRC argument that extensive emergency plan regulations would require a larger NRC staff, the statement suggested that a repetition of the March 28, 1979 Three Mile Island accident in Pennsylvania would "eliminate the need for any NRC staff."

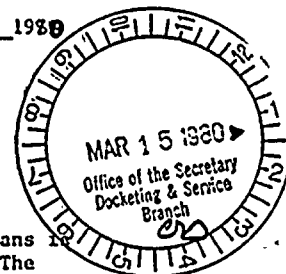

The coalition warned that unless implementation and regular testing of emergency plans was required, the NRC would have no guarantee that the plans were actually being used.

STOP DIABLO!

PROD. & UTIL. FAC 50-275.323 3/8 1980

Federal Nuclear Regulatory Commission
1990 North California Boulevard, Suite 202
Walnut Creek, California 94596

Dear Commissioners:

I believe

the greatest single danger to the health and safety of Californians is the imminent opening of the Diablo Canyon nuclear power plant. The California Energy Commission has shown that any nuclear plant presents extreme hazards, because no feasible, long-term solution has been developed to safely store deadly, radioactive nuclear wastes. Governor Brown's energy advisor, Wilson Clark, has stated that California's earthquake-prone geological condition makes nuclear plants in California an unacceptable risk.

Human beings and the machines they build are all prone to mistakes and accidents. The recent closing of five nuclear plants on the East Coast by the NRC, and the recent accident at the Three Mile Island nuclear plant highlights the risks of nuclear plants. Add to these dangers the risks of earthquakes and we have a completely unacceptable situation.

Please do everything in your power to permanently stop the opening of the Diablo Canyon facility. The health and safety of this and countless future generations of Californians depends on it.

We can easily meet our energy needs by rapidly changing over to solar, wind, biomass, and other safe, renewable energy technologies. Since safe energy is available to us, why should we flirt with ecological disaster by running a nuclear power plant on a fault line.

Please deny Pacific Gas and Electric application for an operating license for their Diablo Canyon facility. Thank you.

Sincerely,

STOP THE DIABLO CANYON NUCLEAR POWER PLANT

.....We the undersigned, as citizens of the State of California and ratepayers of the Pacific Gas and Electric Company, believe that the Nuclear Regulatory Commission and P.G. & E. should not allow the Diablo Canyon Nuclear Power Plant, in San Luis Obispo County, to go into Operation. Nuclear Power is one of the most dangerous technologies known.. ..it poses a grave risk to our health and safety, is a major contributing factor in the spread of nuclear weapons, it is a threat to our civil liberties, and an economically unviable way of generating electricity. Diablo Canyon is in violation of the spirit of the California Nuclear Safeguards Laws regarding the safe disposal of nuclear waste.
