PO. Box 56 • Avila Beach, California 93424 • (805) 595-7351

R.C. THORNBERRY
PLANT MANAGER

June 20, 1985

Mr. Kenneth R. Jones
Executive Officer
California Regional Water Quality
Control Board
Central Coast Region
1102-A Laurel Lane
San Luis Obispo, CA 93401

Dear Mr. Jones:

Discharge Monitoring Program Diablo Canyon Power Plant

The monthly report, consisting of Monitoring Report Form Q-2 and Static Bioassay Report, for the month of May 1985 is enclosed in accordance with amended order 82-24, NPDES No. CA 0003751.

On May 24, 29, 31 and June 1, 1985, the temperature of Unit 1 once through cooling water exceeded 20°F above that of the intake. This is based on data from the temperature recorder from Unit 1 and flow rate averaged with Unit 2 auxiliary saltwater which has a temperature increase of less than 1°F at this time. The information for these occasions are listed below:

| DAY | TIME | AVERAGE $\Delta t, ^\circ F$ | DURATION HOURS | MAXIMUM $\Delta t, ^\circ F$ | DURATION MINUTES |
|--------|-----------------|---------------------------------|-------------------|---------------------------------|---------------------|
| May 24 | 2:00am - 2:25am | 20.7 | 0.5 | 20.7 | 25 |
| 24 | 2:45am - 6:00am | 21.1 | 3.2 | 21.5 | 1 |
| 29 | 5:40am - 5:50am | 20.5 | 0.2 | 20.5 | 10 |
| 29 | 12:05pm | 21.5 | 0.02 | 21.5 | 1 |
| 31 | 2:40am - 6:55am | 20.1 | 4.2 | 20.9 | 1 |
| June 1 | 1:30pm - 1:45pm | 20.3 | 0.3 | 20.6 | 5 |

All of these occasions were during periods of reduced power with one main circulator pump shut down for condenser tube plugging. The saltwater side of one-half of the condenser is drained, and personnel enter the water box to search for and plug the leaking tube. The drained half of the condenser

June 20, 1985

heats up to steam temperatures of 85°F to 90°F. When the circulator is started again, a small spike of 1° to 2° in the discharge of the unit occurs as this accumulated heat in the condenser is removed in the first one or two minutes.

Operations personnel were not aware of these periods of elevated temperatures because the temperature alarm was inoperable during this period, and the temperature recorder is not located in the control room. In order to prevent a recurrence, the temperature alarm circuit has been repaired and a design change has been initiated to install a circulating water temperature monitor in the control room. In the interim, a temporary temperature recorder has been placed in the control room.

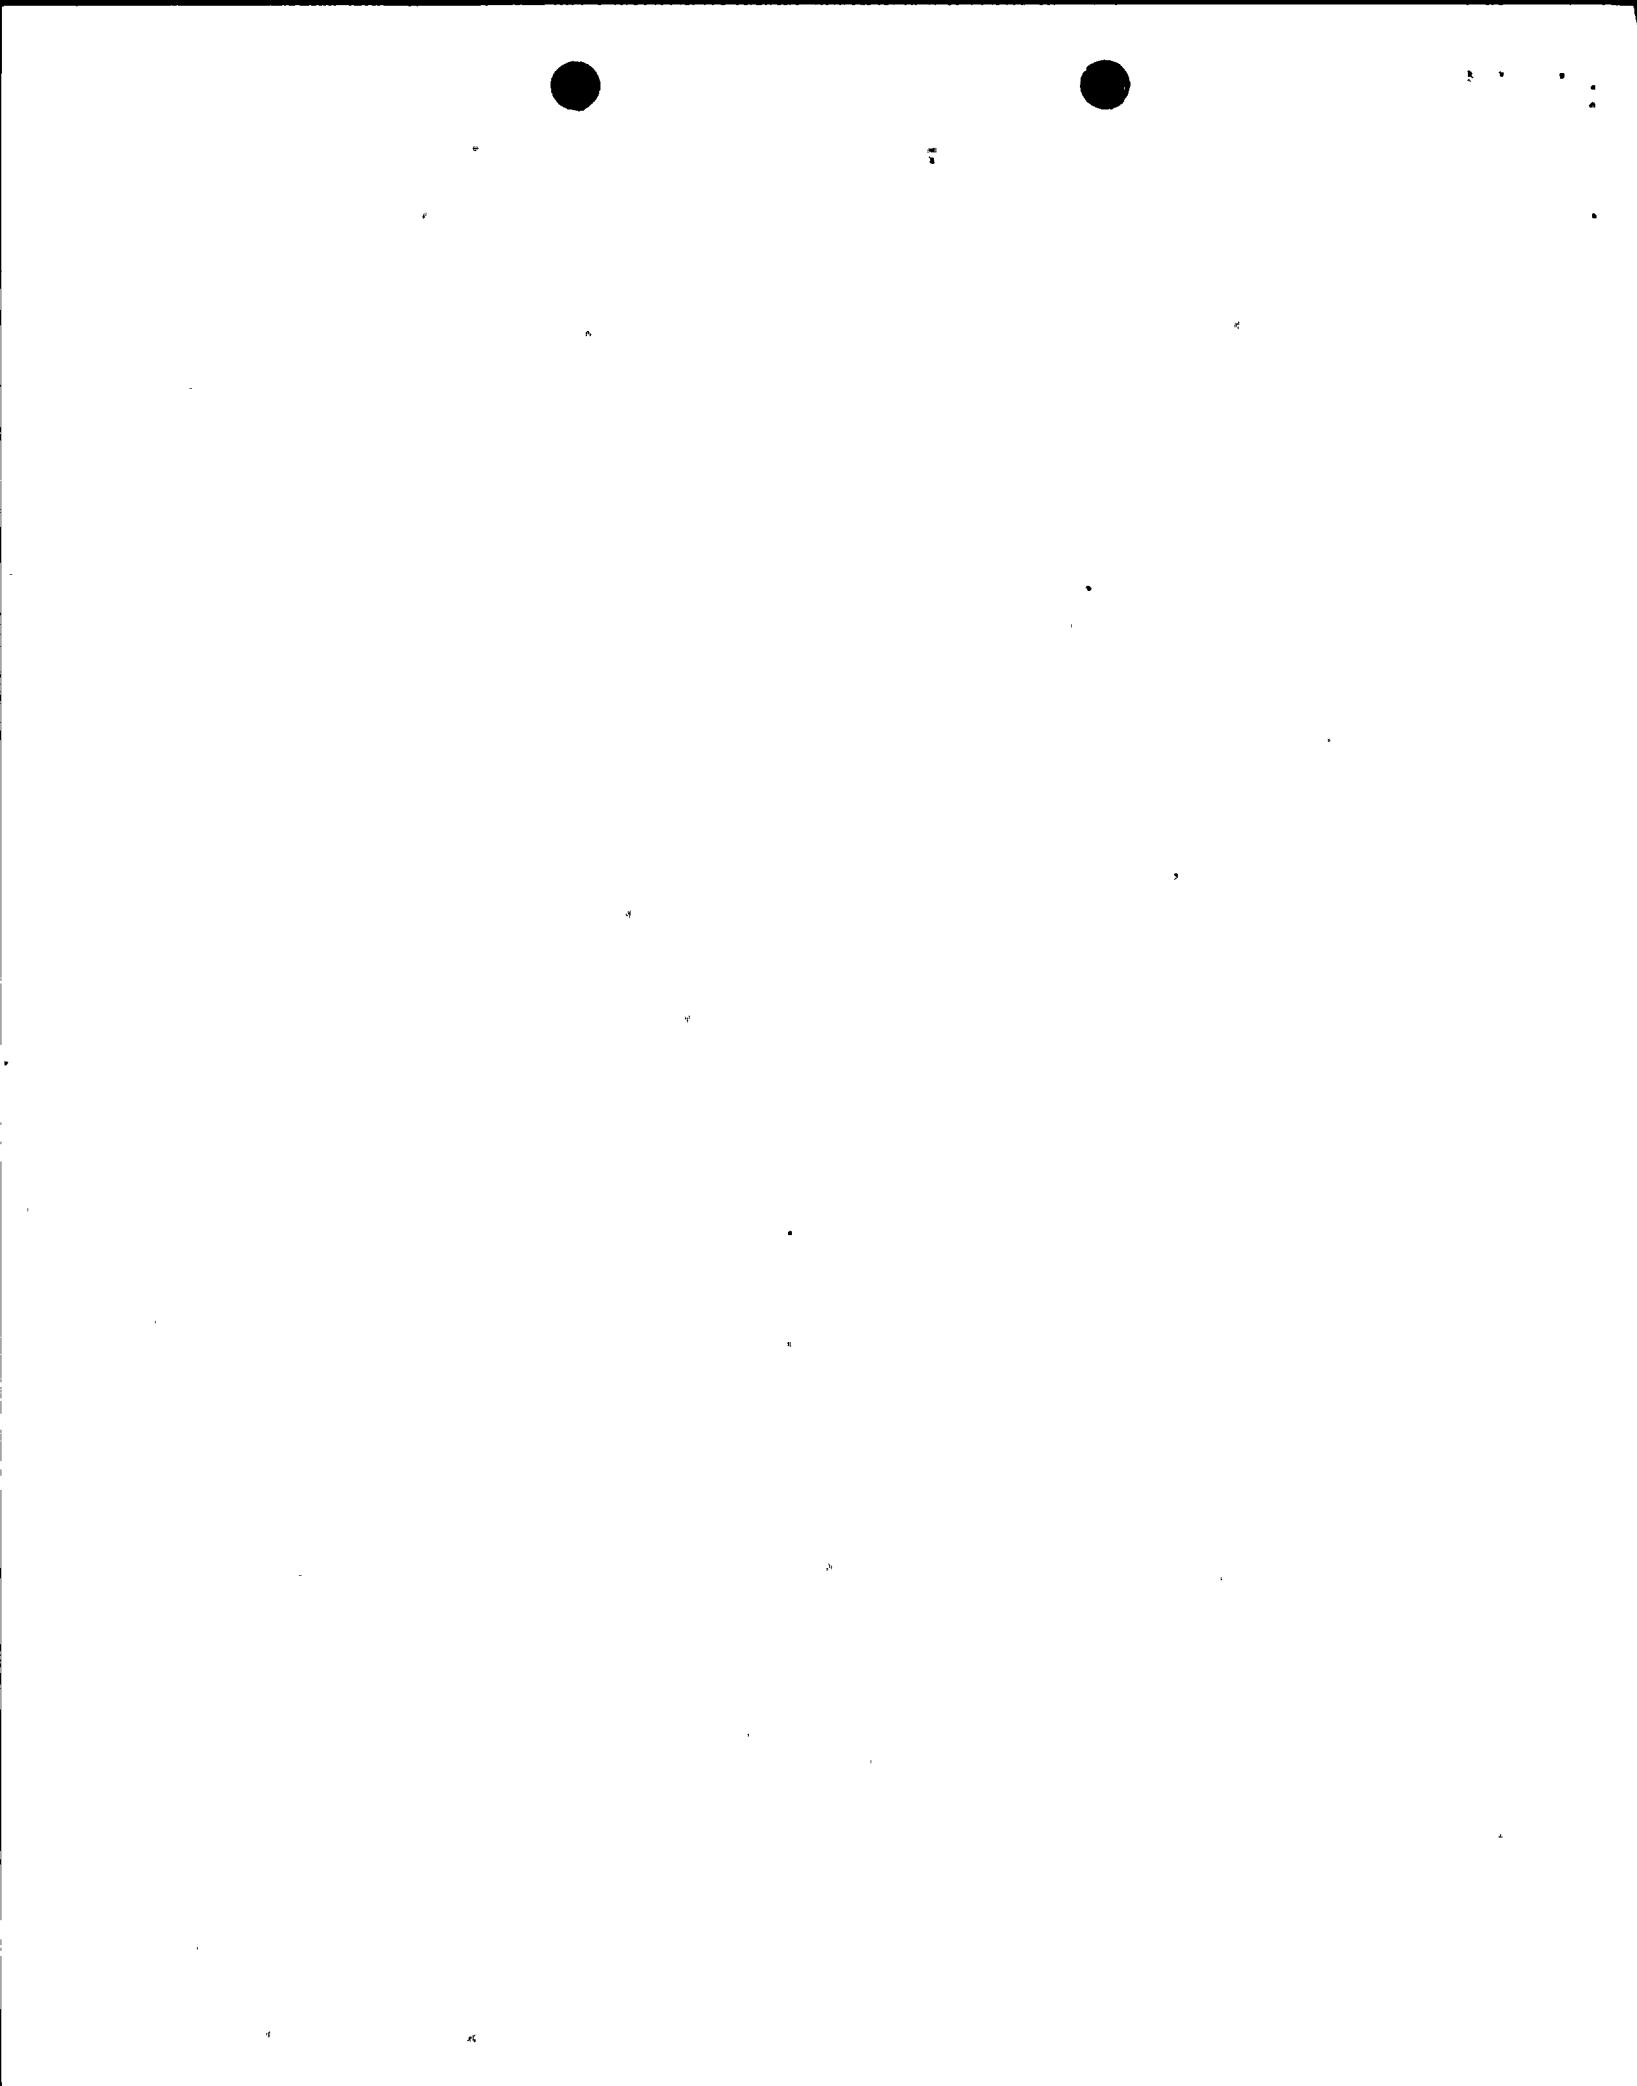

I certify under penalty of law that I have personally examined and am familiar with the information submitted in the enclosed document and all enclosures, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate and complete. The results of influent and effluent monitoring present the observed results of the measurements and analyses required by the monitoring program, and is neither an assertion of the adequacy of any instrument reading or any analytical result, nor an endorsement of the appropriateness of any analytical or measurement procedure. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

Sincerely,

R. C. THORNBERRY
