Docket No. 50-323
Facility Operating License
No. DPR-82

License Amendment Request
No. 86-05

Pursuant to 10 CFR 50.90, Pacific Gas and Electric Company (PGandE) hereby applies to amend its Diablo Canyon Power Plant (DCPP) Facility Operating License Nos. DPR-80 and DPR-82 (Licenses).

The proposed changes amend the Technical Specifications (Appendix A of the Licenses) as regards Technical Specification Table 4.11-2.

Information on the proposed changes is provided in Attachments A and B.

These changes have been reviewed and are considered not to involve a significant hazards consideration as defined in 10 CFR 50.92 or require an environmental assessment in accordance with 10 CFR 51.22(b). Further, there is reasonable assurance that the health and safety of the public will not be endangered by the proposed changes.

Subscribed in San Francisco, California this 10th day of June 1986.

Respectfully submitted,

Pacific Gas and Electric Company

Attachment A

CLARIFICATION OF THE SURVEILLANCE REQUIREMENTS OF
TECHNICAL SPECIFICATION TABLE 4.11-2

A. DESCRIPTION OF AMENDMENT REQUEST

This license amendment request (LAR) proposes to change Technical Specification Table 4.11-2, "Radioactive Gaseous Waste Sampling and Analysis Program," to clarify the type of activity analysis required for containment purge releases.

This LAR proposes to change the type of activity analysis required for containment purge releases from principal gamma emitters with a 10^{-4} lower limit of detection (LLD) to: (1) principal gamma emitters (noble gases) with a 10^{-4} LLD; (2) I-131, I-133 with a 10^{-9} LLD; and (3) principal gamma emitters (particulate) with a 10^{-9} LLD. Also the type of activity analysis for principal gamma emitters for the waste gas decay tank, the plant vent, and the steam generator blowdown tank vent was clarified by adding "(noble gases)."

Changes to the Technical Specifications of Operating License Nos. DPR-80 and DPR-82 are noted in the marked-up copy of the applicable Technical Specifications (Attachment B).

B. JUSTIFICATION

PGandE committed to propose a revision to Table 4.11-2 in the response to IEIR 50-275/85-41 and 50-323/85-39 - Notice of Violation, dated February 24, 1986 (DCL-86-046).

The proposed changes clarify the requirements and provide a more restrictive requirement for the analyses of Table 4.11-2 for containment purge releases by specifying an appropriate LLD for each type of analysis to be performed. These LLDs permit detection at levels that are no more than 3% of the dose rate limits of Technical Specification 3/4.11.2.1.

C. SAFETY EVALUATION

PGandE has evaluated the hazards considerations involved with the proposed amendment, focusing on the three standards set forth in 10 CFR 50.92(c) as quoted below:

"The Commission may make a final determination, pursuant to the procedures in paragraph 50.91, that a proposed amendment to an operating license for a facility licensed under paragraph 50.21(b)

or paragraph 50.22 or for a testing facility involves no significant hazards consideration, if operation of the facility in accordance with the proposed amendment would not:

- (1) Involve a significant increase in the probability or consequences of an accident previously evaluated; or
- (2) Create the possibility of a new or different kind of accident from any previously evaluated; or
- (3) Involve a significant reduction in a margin of safety."

The following evaluation is provided for the significant hazards consideration standards.

1. Does the change involve a significant increase in the probability or consequences of an accident previously evaluated?

The proposed changes clarify the requirements of Table 4.11-2. These proposed changes do not affect the accident analysis. Therefore, this license amendment request does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the change create the possibility of a new or different kind of accident from any accident previously evaluated?

The proposed changes do not necessitate physical alteration of the plant or changes in parameters governing normal plant operation. Therefore, the changes do not create the possibility of a new or different kind of accident from any previously evaluated.

3. Does the change involve a significant reduction in a margin of safety?

The proposed changes clarify the requirements of Table 4.11-2 and provide a more conservative lower limit of detection (LLD) than that presently required for principal gamma emitters (particulates) and I-131, I-133. Therefore, the proposed changes do not involve a significant reduction in a margin of safety.

D. NO SIGNIFICANT HAZARDS CONSIDERATION DETERMINATION

Based on the above safety evaluation, PGandE concludes that the activities associated with this license amendment request satisfy the significant hazards consideration standards of 10 CFR 50.92(c) and, accordingly, a no significant hazards consideration finding is justified.

Small, faint, illegible marks or characters in the top right corner.

E. ENVIRONMENTAL EVALUATION

PGandE has evaluated the proposed change and determined that the change does not involve (i) a significant hazards consideration, (ii) a significant change in the types or significant increase in the amounts of any effluents that may be released offsite, or (iii) a significant increase in individual or cumulative occupational radiation exposure. Accordingly, the proposed change meets the eligibility criterion for categorical exclusion set forth in 10 CFR 51.22(c)(9). Therefore, pursuant to 10 CFR 51.22(b), an environmental assessment of the proposed change is not required.
