Attention: Mr. G. M. Rueger, Senior Vice President and General Manager
Nuclear Power Generation Business Unit

Subject: NRC INSPECTION REPORT NOS. 50-275/93-34 AND 50-323/93-34

This refers to the routine inspection conducted by M. Miller, M. Tschiltz, and J. Winton during the period from December 9, 1993, through January 12, 1994. This inspection examined your activities as authorized by NRC License Nos. DPR-80 and DPR-82. At the conclusion of the inspection, the inspectors discussed their findings with members of the PG&E staff.

Areas examined during this inspection are described in the enclosed inspection report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspectors.

We are concerned that your December 18, 1993, request for enforcement discretion provided limited time for NRC response and evidenced insufficient familiarity on the part of your staff with the requirements of this process. Although the associated technical issues were properly addressed, your staff's previous efforts to correct the weaknesses exhibited during a May 1993 enforcement discretion request did not appear to have been fully effective. We understand that you have initiated actions to provide more effective participation in this process if it should be necessary in the future.

Additionally, a non-cited violation, identified by your staff was noted regarding the fretting of component cooling water (CCW) heat exchanger tubes. This issue involved inadequate procedures to ensure that the CCW heat exchangers were operated within their design flow rates. This issue is discussed in detail in Paragraph 8 of the enclosed report. Since the criteria of the NRC Enforcement Policy were satisfied, this violation is not being cited.

In accordance with 10 CFR 2.790(a), a copy of this letter and the enclosure will be placed in the NRC Public Document Room.
