Re: Docket No. 50-275, OL-DPR-80
Docket No. 50-323, OL-DPR-82
Diablo Canyon Units 1 and 2
Replacement Pages for License Amendment Request 93-03

Gentlemen:

On July 6, 1993, PG&E submitted License Amendment Request (LAR) 93-03. LAR 93-03 proposed to revise the Diablo Canyon Technical Specifications (TS) to relax the slave relay test frequency for certain slave relays that cause undesirable equipment actuations at power. The proposed relaxation changes the test frequency from quarterly to at least once per 18 months during refueling or cold shutdown.

Additionally, Amendment 84 to Facility Operating License No. DPR-80 and Amendment 83 to Facility Operating License No. DPR-82 were issued on October 7, 1993. These amendments added footnote (3) to TS 3/4.3.2, Table 4.3-2. Footnote (3) was also requested for use as part of LAR 93-03. Therefore, footnote (3) specified in LAR 93-03 must be changed to footnote (4).

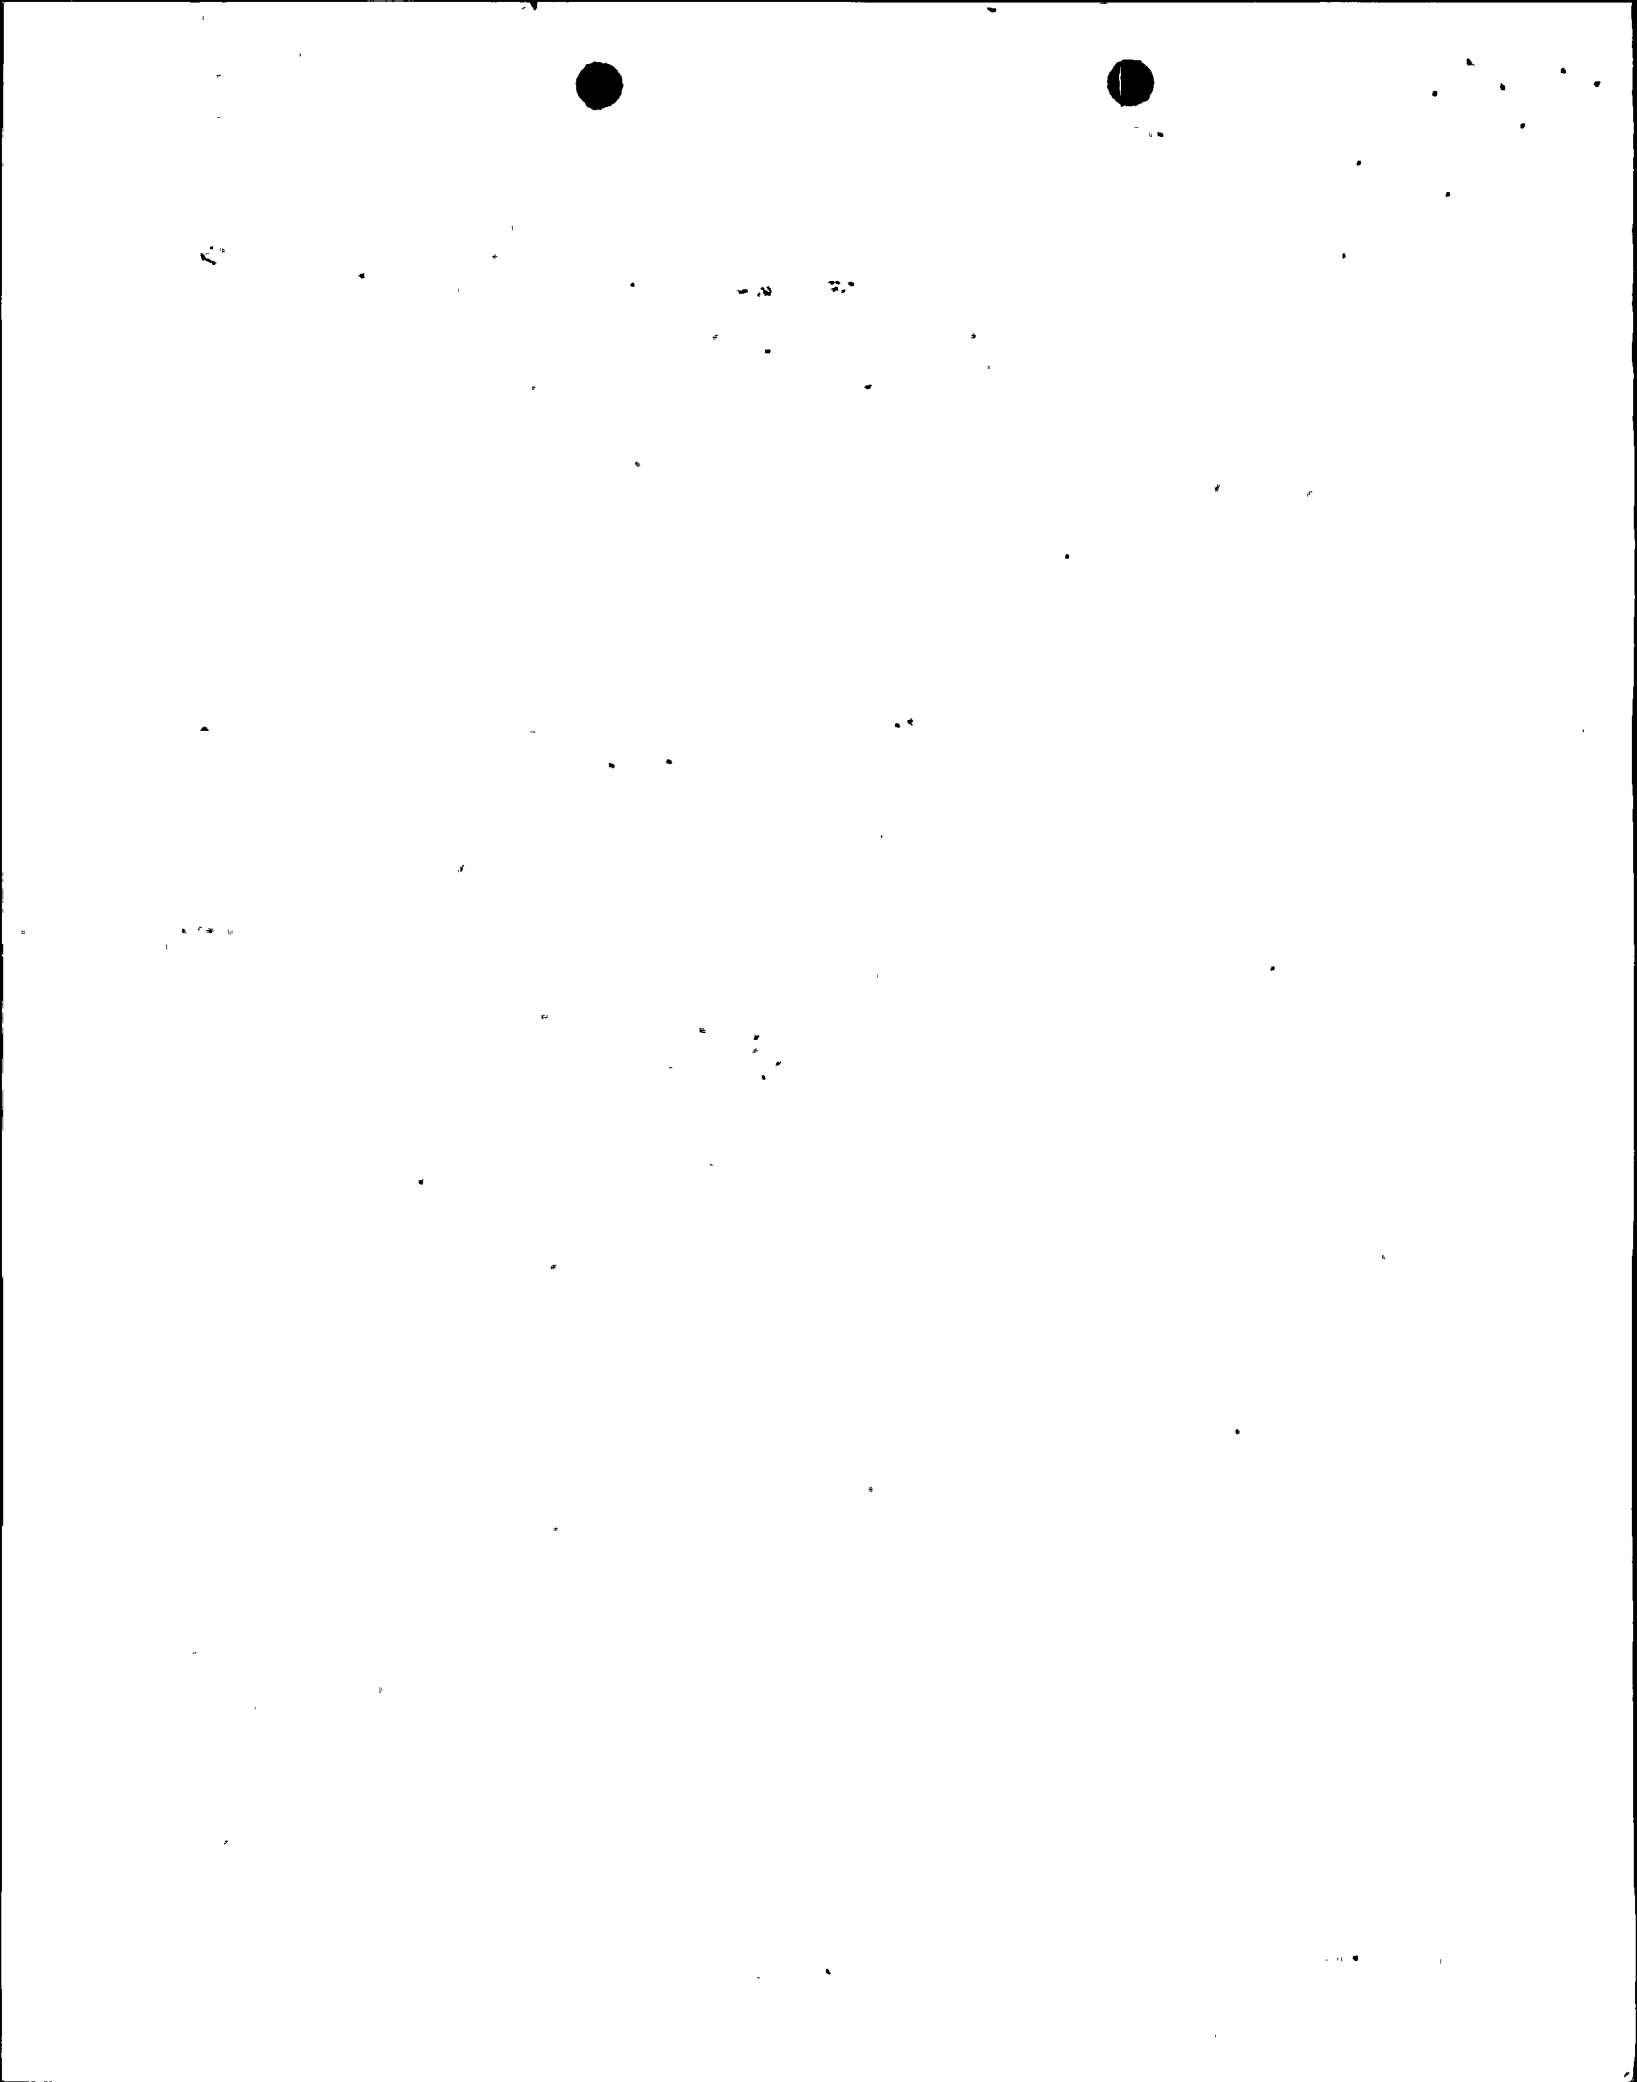

The original LAR requested that the LAR be made effective 30 days after the issuance of a license amendment to allow for orderly revision of procedures and implementation of a design change. In order to implement the LAR, design changes in the solid state protection system are required for both units. These design changes were considered for performance at power. However, due to the risk of initiating a plant transient during the performance of the design changes, the design changes have been scheduled to be performed when the unit is shutdown for refueling. Since the affected systems are not in service during a refueling outage, performance of the design changes poses no risk during a refueling outage. The design changes required to implement the LAR are scheduled to be completed during the next refueling outage for each unit. Therefore, the new footnote (4) was revised to make the TS changes effective for Cycle 7 for Units 1 and 2.

This supplemental letter also proposes to delete the list of effective TS pages added to the license as part of Amendments 78 for Facility Operating License No. DPR-80 and Amendment 77 for Facility Operating License No. DPR-82. The list of effective TS pages has proven to be an unnecessary administrative burden that adds no value to the TS. This change is an administrative change that does not affect the safe

operation of Diablo Canyon or the conclusions in the safety evaluation for license Amendments 78 and 77 for License Nos. DPR-80 and DPR-82, respectively.

The revised TS pages are provided in the enclosures to this letter. The proposed changes do not affect the results of the safety evaluation performed for LAR 93-03.

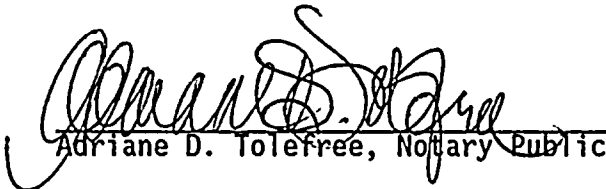

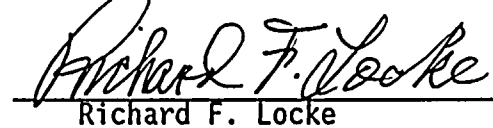

Sincerely,

Gregory M. Rueger
