Docket No. 50-323, OL-DPR-82  
Diablo Canyon Units 1 and 2  
Spent Fuel Pool Low Temperature Safety Evaluation

Dear Commissioners and Staff:

On April 4, 1996, PG&E informed the NRC via telephone that the current Spent Fuel Pool temperature in Unit 2 was 66°F, which was 2 degrees below the reference temperature stated in the Holtec criticality analysis (HI-931076-2) previously submitted to the NRC in License Amendment Request 95-01.

As a result of this low temperature condition, a Safety Evaluation was performed in accordance with 10 CFR 50.59. The results of this Safety Evaluation concluded, and provided basis for the determination, that this condition did not involve an unreviewed safety question.

Per our agreement in the April 4, 1996 telephone call, we are enclosing the Safety Evaluation on Spent Fuel Pool Low Temperature for your information.

Sincerely,

A handwritten signature in black ink, appearing to read 'Greg. Rueger'. The signature is written in a cursive, flowing style.

Gregory M. Rueger
