**Cc:** NOSS Philip (AREVA) <phil.noss@areva.com>  
**Subject:** Request--Information - Model No. BRR 71.95 Report dated 8/26/15

Good morning,

I worked with the U.S. Nuclear Regulatory Commission (NRC). I was assigned to review the report dated August 26, 2015 (ADAMS Accession No. ML15243A035) that you (MIT) filed regarding the Model No. BRR. The report notes a non-conformance related to Drawing No. 1910-01-01-SAR, Revision 4, Sheet 3 of 4. I need the following information from you (as the user of the package) in order to finalize the review of your report:

1. The identification No. of this action in the certificate holder's corrective action program and associated closing actions (e.g., repair report, etc.).
2. Repair report from the CoC holder, including the date of the repair, contractor qualification to perform the repair, who supervised the repair on-site, etc. – The report only mentions that the package would be repaired by a qualified contractor, but does not provide information about how and when the package was brought back into compliance.
3. Leak test date and results after repair – The report mentioned that a leak test would be performed after finalizing the repair, but no further information is provided in this regard.
4. Modifications performed to the handling procedures, if any – The report mentions the possibility of modifying the package handling procedures, but no additional details are provided in the August 2015 letter.
5. Information related to the root cause (or root causes) of the damage – The report mentions that the CoC holder would be following up. I will appreciate that you provide information in this regard.

I am copying Phil Noss from AREVA Federal Services LLC for his awareness.

Please contact me if you have any questions about this request.

Have a nice day,

*Norma Garcia Santos*
