Division of Spent Fuel Management
Office of Nuclear Material Safety
and Safeguards

SUBJECT: SUMMARY OF DECEMBER 6, 2016, PUBLIC MEETING WITH HOLTEC
INTERNATIONAL TO DISCUSS THE ENVIRONMENTAL REPORT FOR
THE PROPOSED SITE-SPECIFIC LICENSE APPLICATION FOR THE
HI-STORE CONSOLIDATED STORAGE FACILITY IN LEA COUNTY,
NEW MEXICO

On December 6, 2016, staff from the Division of Spent Fuel Management and the Division of Fuel Cycle Safety, Safeguards, and Environmental Protection held a public meeting with representatives from Holtec International (Holtec), at the U.S. Nuclear Regulatory Commission (NRC) Headquarters in Rockville, MD. The purpose of the meeting was to provide NRC staff an overview and preliminary details of the Environmental Report (ER) that Holtec plans to submit in support of their proposed application for a site-specific license for the HI-STORE Consolidated Interim Storage Facility (CISF), to be located in Lea County, New Mexico (NM). No regulatory decisions were made nor requested at this meeting.

During the initial part of the presentation, Holtec provided an overview of the proposed site for the HI-STORE Consolidated Interim Storage Facility in Lea County, NM, the status of planning activities for the submission of the site-specific license application, and a preliminary timeline for licensing, construction, and operation activities at the site. Holtec stated that the proposed site is located approximately 32 miles east of Carlsbad, NM and 34 miles west of Hobbs, NM. Holtec's initial license application will seek authorization to store approximately 5,000 metric tons of uranium (MTUs), with subsequent amendments to increase the capacity of the facility to store a maximum of 100,000 MTUs.

Following this overview, Holtec and representatives from Tetra Tech, Inc., provided a detailed discussion of the schedule, contents, and scope of the proposed ER for the HI-STORE CISF. Holtec discussed that the proposed ER will be prepared following the guidance in Regulatory Guide 3.50 and NUREG-1748. Holtec also stated that it intends to evaluate the environmental impacts from the construction, operation, and decommissioning of the HI-STORE CISF with a storage capacity of up to 100,000 metric tons. Holtec explained that the initial 5,000 MTU construction and storage operation of the facility will be subsequently followed by phased expansions and additional storage operations at the site. Holtec discussed the proposed outline

of the ER, which included a discussion of the data sources, both existing and newly-generated, that they propose to use to describe the affected environment, and a detailed discussion of the methodologies that they intend to use to describe and quantify the environmental impacts from the construction, operation and decommissioning of the facility. Holtec concluded its presentation with a summary of the preliminary environmental findings it has made based on the proposed activities at the site.

Following Holtec's presentation, NRC staff asked questions related to the proposed timelines, scope, and methodologies to be used in the proposed ER. NRC staff questions for Holtec focused on the specific timelines that are being proposed for concurrent construction and operations at the site, and provided several suggestions for Holtec to consider in its ER. NRC staff's questions sought to clarify the expected schedules for the proposed phases of construction and operation that Holtec is planning to implement, and ensure that their analyses properly consider the impacts arising from concurrent construction and storage operations at the site. NRC staff encouraged Holtec to continue to engage NRC staff in its development of the final ER.

After the business portion of the meeting, members of the public, in attendance and participating by phone, asked questions and provided comments to NRC staff. NRC staff provided responses or clarifications to the questions provided.

The attendance list (Enclosure 1) and slides for the meeting (Enclosure 2) are enclosed.
