Subject: [External_Sender] Lost Creek Unplanned Release 11365
Date: Monday, January 09, 2017 5:41:36 PM

An unplanned release was discovered by a wellfield operator on January 9, 2017 at approximately 0930 hrs at the Lost Creek ISR Project (PT788/SUA-1598) site resulting in the release of an estimated 3,654 gallons of injection fluid. The release from injection well 11365 was reported on the WDEQ-LQD spill report website spill ID 170109-1520.

The release occurred from the injection well vent which was alleged to have broken due to freezing. The site was experiencing very cold conditions and the release was not immediately visible due to snow cover. Further details will be provided in the pending written report.

If you have any questions, please contact me.
