Subject: [External_Sender] We Need an Apollo Program for Gen IV Reactors
Date: Tuesday, April 12, 2016 4:51:25 AM

To whom it may concern.

Given the global crisis we face with Climate Change and Ocean Acidification I believe that nothing less than an Apollo program is needed to move Gen IV nuclear technology forward as quickly as possible. The gains from converting to an energy source that is potentially cheaper and safer than fossil fuels would make such a venture very worthwhile financially as well. It would also go a long way towards restoring public support for nuclear power. The alternative would be to do nothing and fall behind China, Russia, and India. Our ability to produce the cheapest, and cleanest electricity is ultimately be the rubric for our continuing economic success.

Respectfully,
Gabriel Ignetti
