## General Comment

Any changes to the U.S. Nuclear Regulatory Commission's (NRC) and U.S. Department of Transportation's (DOT) regulations, to "harmonize" them (make them compatible) with International Atomic Energy Agency (IAEA) regulations and standards, should be in the direction of BETTER protecting worker and public health, safety, and the environment.

BETTER means protecting the planet and people. BETTER does not refer to saving the nuclear industry money and increasing profits

BETTER means regulations needed to protect our world must be strengthened. BETTER does not refer to industry lingo that aims to weaken what few regulations currently exist.
