

CONVERSATION SUMMARY

Date: January 5, 2017

Subject: Entergy request for an extension to respond to staff's Request for Additional Information (RAI) related to Commission Order CLI-16-07 regarding sensitivity analysis for the TIMDEC and CDNFRM inputs to the MACCS code

Participants: William Burton, NRC
Richard Louie, Entergy

On January 5, 2017, William Burton (NRC) received a phone call from Richard Louie (Entergy) requesting an extension of time to provide Entergy's response to the staff's RAI requesting additional information on the decontamination time (TIMDEC) and cost to decontaminate non-farmland (CDNFRM) inputs used in the MELCOR Accident Consequence Code (MACCS) computer analyses. Entergy's basis for the extension was to have additional time to complete review of the response by Entergy management.

Mr. Burton consulted with the staff's subject matter experts and all agreed to grant the extension to February 9, 2017.
