OMAHA PUBLIC POWER DISTRICT

Issuance of Amendment to Facility Operating License and Negative Declaration

Notice is hereby given that the U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 10 to Facility Operating License No. DPR-40 issued to Omaha Public Power District which revised Technical Specifications for operation of the Fort Calhoun Station, Unit 1, located in Washington County, Nebraska. The amendment is effective as of its date of issuance.

The amendment will permit the release of radioactive gaseous waste collected in the gas decay tanks prior to the minimum 30-day holdup period from November 22, 1975, to December 22, 1975.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations to 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment is not required since the amendment does not involve a significant hazards consideration.

The Commission has prepared an environmental impact appraisal for the revised Technical Specifications and has concluded that an environmental impact statement for this particular action is not warranted because there will be no environmental impact attributable to the proposed action other than that which has already been predicted and described in the Commission's Final Environmental Statement for Fort Calhoun Station, Unit 1 published in August 1972, and that a negative declaration to this effect is appropriate.

For further details with respect to this action, see (1) the application for amendment dated November 21, 1975, (2) Amendment No. 10 to License No. DPR-40, (3) the Commission's related Safety Evaluation and (4) the Commission's Environmental Impact Appraisal.
