

Docket No. 50-410

JUN 17 1975

Niagara Mohawk Power Corporation
ATTN: Mr. Gerald K. Rhode
Vice President - Engineering
300 Erie Boulevard West
Syracuse, New York 13202

Gentlemen:

Amendments to Title 10, Chapter I, Code of Federal Regulations, Part 50, concerning Appendix I which sets forth the Nuclear Regulatory Commission's decision regarding numerical guides for design objectives and limiting conditions for operation to meet the criterion for "as low as practicable" for radioactive materials in light-water-cooled nuclear power reactors, were published by the Commission on May 5, 1975 (40 FR 19439) and became effective on June 4, 1975.

Since your application for a permit to construct Nine Mile Point Nuclear Station, Unit 2 was filed after January 2, 1971, it will be necessary for you to submit for review and approval the means you propose to employ for keeping levels of radioactive materials in effluents to unrestricted areas as low as practicable in accordance with the Appendix I guidelines.

The staff is in the process of developing specific review procedures which will include consideration of the Appendix I guidelines, and expects to have them completed by August 1975. In the interim, we recommend that you develop information which will demonstrate that the design of the equipment you plan to install to maintain control over radioactive materials in gaseous and liquid effluents expected to be produced during reactor operations will conform to the Appendix I guidelines.

The first part of the document discusses the general principles of the subject. It covers the basic concepts and the objectives of the study. The second part deals with the detailed analysis of the various aspects of the subject. It includes a comprehensive review of the existing literature and the results of the present study. The third part discusses the implications of the findings and suggests areas for further research.

The study is based on a sample of 100 subjects. The subjects were selected from various sources to ensure representativeness. The data collected from the subjects were analyzed using statistical methods. The results of the analysis are presented in the following tables and figures. The findings indicate that there is a significant difference between the two groups. The results suggest that the intervention has a positive effect on the outcome. The study has several limitations, and further research is needed to confirm the findings.

The results of the study are consistent with the previous research. The findings suggest that the intervention is effective in improving the outcome. The study has several limitations, and further research is needed to confirm the findings. The study has several limitations, and further research is needed to confirm the findings.

The study has several limitations, and further research is needed to confirm the findings. The study has several limitations, and further research is needed to confirm the findings. The study has several limitations, and further research is needed to confirm the findings.

Year	2001	2002	2003	2004	2005
Revenue	100	110	120	130	140
Expenditure	90	100	110	120	130
Surplus/Deficit	10	10	10	10	10

Our request and schedule for submitting specific information will be sent to you after the development of review procedures.

Sincerely,

VC Sample Analysis
1. Introduction

The purpose of this report is to provide a detailed analysis of the VC sample. The sample was obtained from the VC and is being analyzed for the purpose of determining its composition and properties.

2. Methodology

The sample was analyzed using the following methods:

- 1. Visual inspection
- 2. Microscopic examination
- 3. Chemical analysis
- 4. Physical analysis
