

JAN 29 1974

Docket No. 50-220

Niagara Mohawk Power Corporation
ATTN: Mr. Philip D. Raymond
Vice President - Engineering
300 Erie Boulevard West
Syracuse, New York 13202

Gentlemen:

We are reviewing the information which you submitted on June 29, 1973, concerning the high energy line breaks outside the containment for the Nine Mile Point Unit 1. We find that our review cannot be completed without the following additional information:

1. Define the minimum design pressure of the main steam tunnel and/or its component walls or slabs.
2. Describe the anchors at the main steam line isolation valves and/or the seismic restraints designed as pipe whipping restraints.
3. Describe the reactor cleanup system pipeline run as related in proximity to the torus. Provide necessary plan and elevation drawings showing its routing. Indicate whether a rupture of this pipeline could cause damage to the torus.

You are requested to provide this information in one signed original and thirty-nine copies by March 1, 1974. Please contact us if you have any questions regarding the information requested.

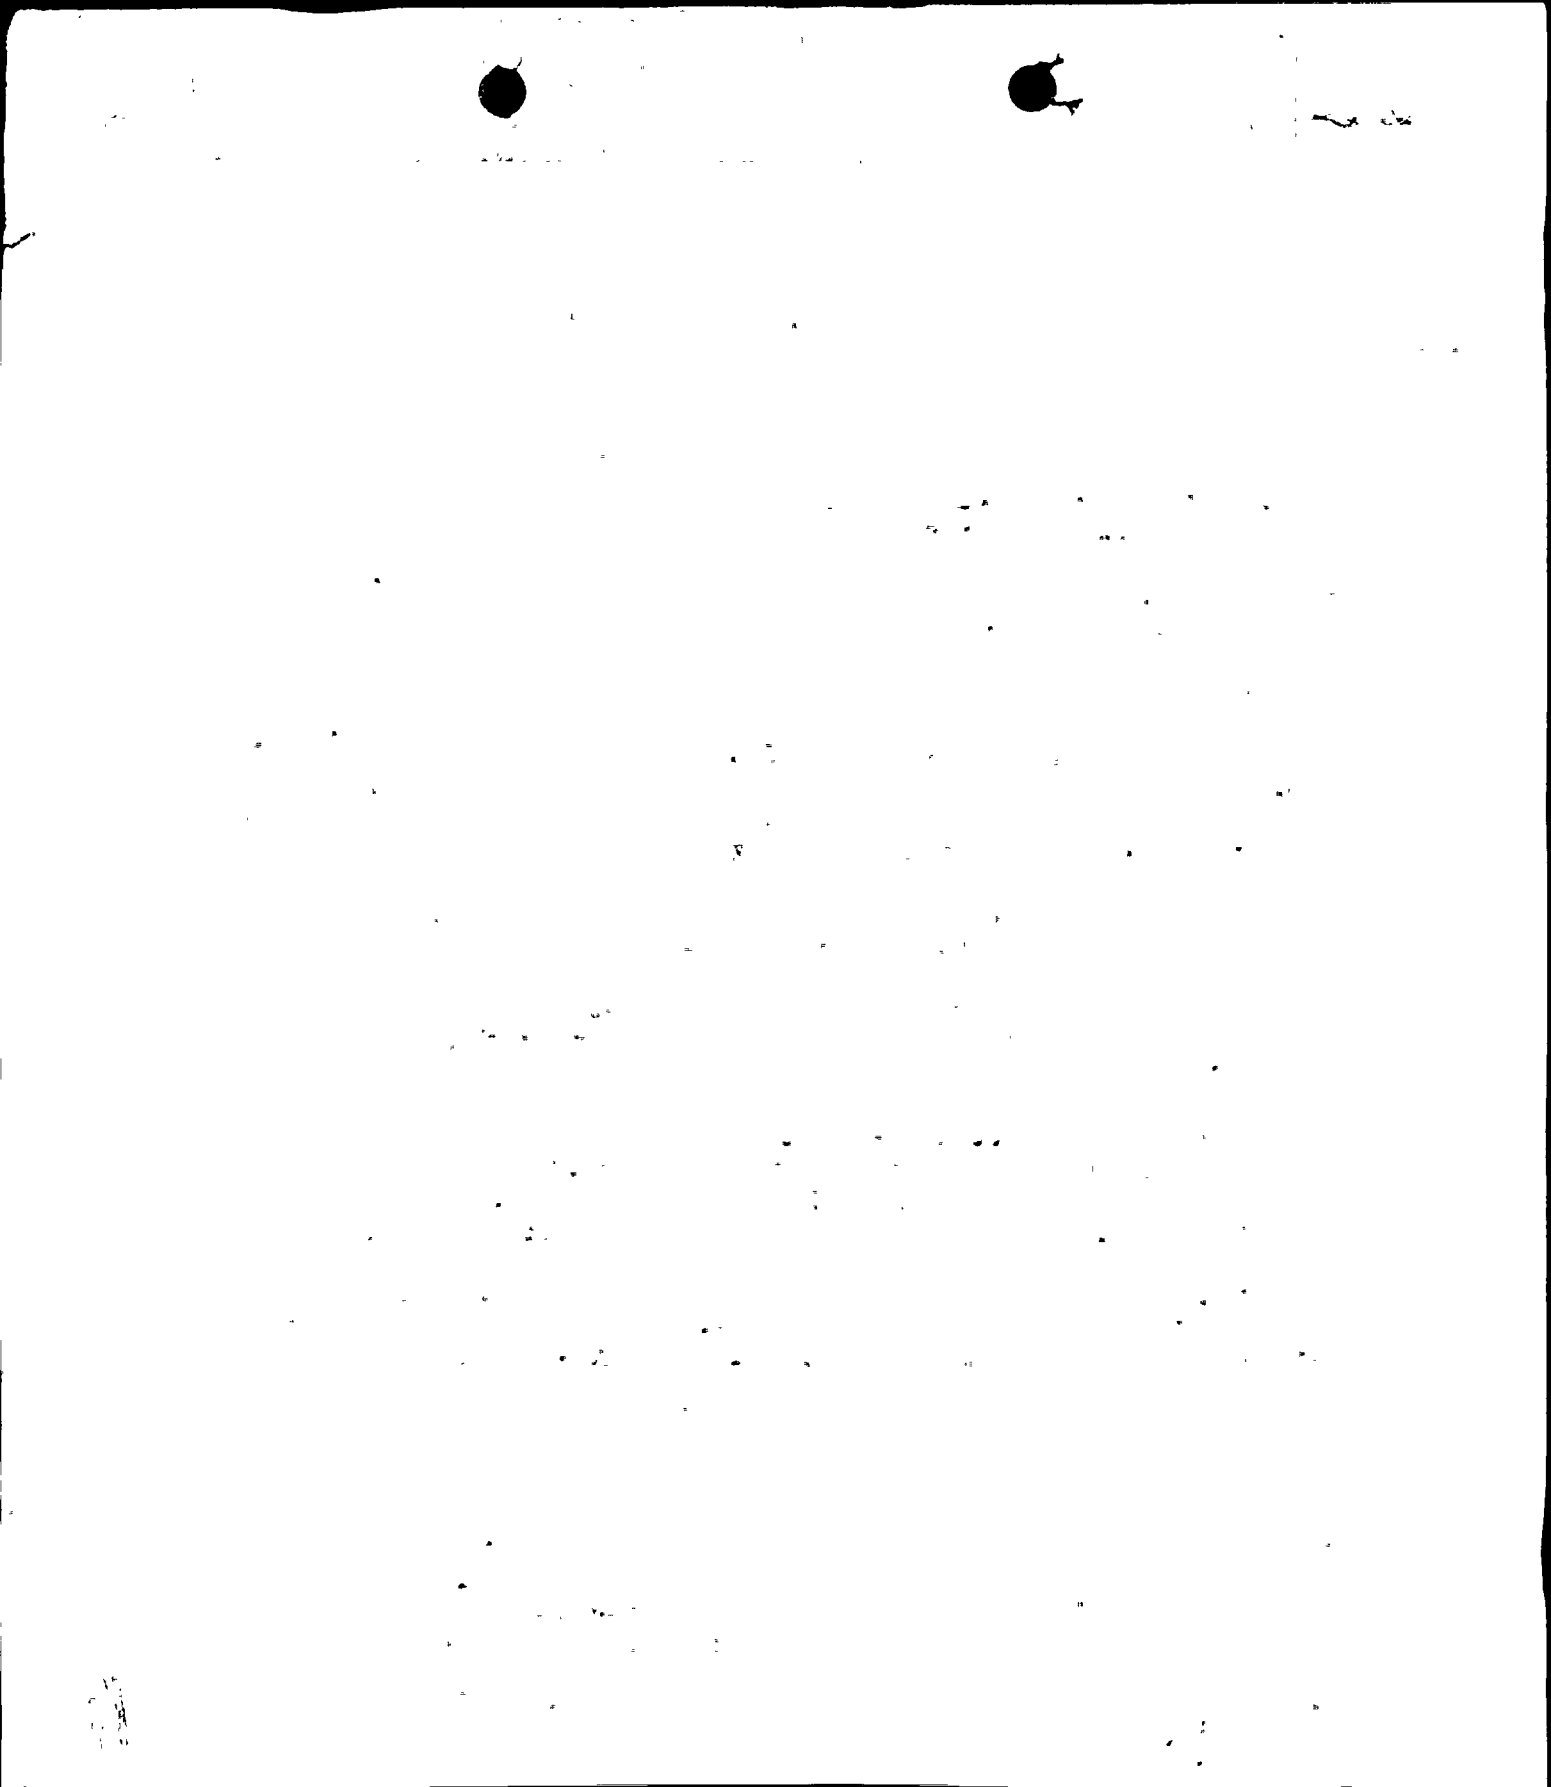

Sincerely,

Orig. [initials]
Dennis L. Ziemann
