1.0 INTRODUCTION

The purpose of this investigation was to evaluate the impact of the existing intake structures for Units 1 and 2 of the Waterford Power Station on the biota of the Mississippi River. Waterford Power Station is located on the west bank of the Mississippi River in Killona, Louisiana (approximately River Mile 130 AHP).

The investigation consisted of one year of semimonthly monitoring at the plant's intake structure after Units 1 and 2 began commercial operation. This report presents the results of the 24 semimonthly diurnal screen impingement surveys beginning in February 1976 and ending in January 1977. Table 1-1 provides the date of each sampling run, the number of circulators operational, the volume of cooling water pumped through the plant from the river during the 24-hour period, and the river stage. River stage is also graphically displayed in Fig. 1-1 for February 1976 to January 1977.

2.0 METHODS AND MATERIALS

2.1 Equipment

Dissolved oxygen and water temperature were measured with a YSI Model 51A dissolved oxygen, temperature meter. The range of the meter is -5 to +45 C and 0-15 mg/ℓ oxygen (O₂). These temperature measurements are accurate to better than ±0.7 C with the dissolved oxygen measurements being accurate to ±0.2 mg/ℓ O₂ when calibrated to ±5 C of actual sample temperature.

Conductivity was measured with a YSI Model 33 S-C-T (Salinity-Conductivity-Temperature) meter. The meter range is 0-50,000 μmhos/cm for conductivity. The maximum error is ±2.5% at 500, 5,000, and 50,000 μmhos/cm plus probe and ±3.0% at 250, 2,500, and 25,000 μmhos/cm plus probe. The maximum error introduced by the probe is ±2.0% of the reading for conductivity.

Measurements of pH were made with a Fischer Accumet 120 pH meter. The relative accuracy of the meter is ±0.1 with repeatability of ±0.05.

Biological samples were collected in the sluiceway with three baskets; two constructed of 1/4" expanded metal, framed with angle iron and the third basket of 1/2" hardware cloth framed with angle iron. Weights were measured on an O Haus Dial-O-Gram balance, which is sensitive to ±0.1 gram. Lengths for all organisms were measured to the nearest millimeter. The standard length was measured on all fish, the shrimp were measured from the tip of the rostrum to the tip of the telson, while the carapace width of the blue crab is reported.

Document No. 7731

2.2 Data Collection

Data collection was designed so as not to interrupt the normal plant operations. A 24-hour time unit was designated with the screens being run, washed, and cleared at the outset of the period. Baskets were then set in a series in the sluiceway (see Fig. 2-1). The two 1/4" expanded metal baskets were placed closest to the screens with the 1/2" hardware cloth basket last as a backup. Collections were made when one or more of the screens operated during the 24-hour sampling period. For the final 30 minutes all screens were run and washed, and simultaneously stopped at the end of the twenty-fourth hour.

Physical and chemical data were collected from the Unit 1 West and the Unit 2 East intake pump screen wells at approximately six-hour intervals. Dissolved oxygen, water temperature and conductivity were measured in situ. Water samples were pulled from the appropriate wells, and pH was measured within 30 minutes of sample collection.

All organisms collected during each diurnal were identified to species, except when precluded by physical condition. Physical injuries were noted (Section 3.2.2).

All fish and crustaceans were individually weighed and measured, with the exception of three samples of the bay anchovy (Anchoa mitchilli) and numerous samples of the river shrimp (Macrobrachium ohione). These samples were sub-sampled such that all measurements were taken on 25 randomly selected individuals. Total weight is provided for all species.

FIG. 2.1 LOCATION OF SCREEN SAMPLE SITES

Document No. 7731

3.0 RESULTS

3.1 Physical Data

The water chemistry data, including water temperature, dissolved oxygen, conductivity and pH, are presented by date and time in Table 3-1 along with the number of circulating water pumps operating for each unit.

Local climatological data from the New Orleans International Airport are given in Table 3-2. These data are comprised of maximum and minimum temperatures, average dew point, average wind speed and resultant wind direction.

3.2 Biological Analysis

3.2.1 Biomass and Species Composition - Listed in Table 3-3 are the data collected for each species of fish and crustacean from February 1976 through January 1977. In instances where taxonomic identification to the species level was not possible, generic names are reported. Table 3-4 presents a summary of total biomass impinged during each 24-hour sampling period, further divided by fish and crustaceans. Species lists of all fish and crustaceans collected during the survey year are presented in Tables 3-5 and 3-6, respectively.

3.2.2 Observations on the Extent of Physical Injury - Physical injuries were qualitatively noted in situ as well as during laboratory measurements. The catfish (Ictaluridae) displayed hematomas around the mouth and appendages. This damage appeared to be most common in the body areas adjacent caudal and anal fins. Spines and soft rays were also impacted. Shredding and abrading of the

Document No. 7731

soft rays was common. Spines were sometimes broken. Infrequently there was loss of appendages and severe abrasions. The scaled fish also exhibited hematomas around the head and appendages. Scale loss was common. Loss and shredding of soft rays occurred frequently. The crustaceans and eels were essentially uninjured. The crabs and shrimp sometimes had lost an appendage; however, their exoskeleton appeared undamaged with the exception of occasional rostral loss in shrimp. Eels were very active and aggressive with no external damage apparent.

<i>Macrobrachium ohione</i>	22	48(32-63)	1.8(0.8-4.6)	39.0

TABLE 3-4
BIOMASS SAMPLE SUMMARY DATA AT WATERFORD POWER STATION
February 1976 through January 1977

Sample Date	Total Fish Weight (g)	Total Crustacea Weight (g)	Total Sample Weight (g)
2-3 February 1976	3510.6	82.3	3592.9
16-17 February 1976	4699.5	136.5	4836.0
2-3 March 1976	12455.4	289.4	12744.8
15-16 March 1976	21293.8	8.0	21301.8
7-8 April 1976	11554.9	166.3	11721.2
21-22 April 1976	10501.4	3144.3	13645.7
5-6 May 1976	8536.4	1344.5	9880.9
18-19 May 1976	3582.9	1843.2	5426.1
2-3 June 1976	3480.6	1382.1	4862.7
16-17 June 1976	9950.5	1325.5	11276.0
7-8 July 1976	10280.1	2933.2	13213.3
27-28 July 1976	2858.1	884.2	3742.3
10-11 August 1976	3492.9	527.1	4028.0
26-27 August 1976	5691.8	260.3	5952.1
8-9 September 1976	5473.5	1811.2	7284.7
22-23 September 1976	3956.1	1653.1	5609.2
7-8 October 1976	2200.9	1651.9	3852.8
21-22 October 1976	6563.5	3179.6	9743.1
3-4 November 1976	8402.0	1637.3	10039.3
18-19 November 1976	26794.6	276.3	27070.9
9-10 December 1976	33463.6	96.8	33560.4
21-22 December 1976	19766.5	164.6	19931.1
5-6 January 1977	8407.5	105.4	8512.9
20-21 January 1977	33062.7	39.0	33101.7

TABLE 3-5

FISH SPECIES¹ COLLECTED FEBRUARY 1976 THROUGH JANUARY 1977

Scaphirhynchus albus - pallid sturgeon
Scaphirhynchus platorhynchus - shovelnose sturgeon
Polydon spathula - paddlefish
Lepisosteus platostomus - alligator gar
Elops saurus - ladyfish
Anguilla rostrata - American eel
Alosa chrysochloris - skipjack herring
Brevoortia patronus - gulf menhaden
Dorosoma - shad
Dorosoma cepedianum - gizzard shad
Dorosoma petenense - threadfin shad
Anchoa mitchilli - bay anchovy
Salmo gairdneri - rainbow trout
 Cyprinidae - carp or minnow
Cyprinus carpio - carp
Hybopsis storeriana - silver chub
Notemigonus crysoleucas - golden shiner
Notropis sp. - minnow
Notropis atherinoides - emerald shiner
Notropis emiliae - pugnose minnow²
Notropis shumardi - silverband shiner
Notropis texanus - weed shiner
Notropis volucellus - mimic shiner
Phenacobius mirabilis - suckermouth minnow
Pimephales vigilax - bullhead minnow
Carpionodes carpio - river carpsucker
Ictiobus bubalus - smallmouth buffalo
Ictalurus furcatus - blue catfish
Ictalurus natalis - yellow bullhead
Ictalurus punctatus - channel catfish
Pylodictis olivaris - flathead catfish
Morone chrysops - white bass
Morone mississippiensis - yellow bass

TABLE 3-5 (cont'd)

Morone saxatilis - striped bass
Lepomis gulosus - warmouth
Lepomis humulis - orangespotted sunfish
Lepomis macrochirus - bluegill
Lepomis punctatus - spotted sunfish
Lepomis symmetricus - bantam sunfish
Micropterus punctulatus - spotted bass
Stizostedion canadense - sauger
Archosargus probatocephalus - sheepshead
Aplodinotus grunniens - freshwater drum
Mugil cephalus - striped mullet
Paralichthys lethostigma - southern flounder
Trinectes maculatus - hogchoker

¹ Bailey 1970

² Formerly reported as *Opsopoeodus emiliae*

TABLE 3-6
CRUSTACEA COLLECTED FEBRUARY 1976 THROUGH JANUARY 1977

Callinectes sapidus - blue crab
Macrobrachium ohione - river shrimp
Procambarus sp. - crayfish
