This is in response to an article on dumping waste in West Texas.

To whom it may concern,

I have family that live on and operate ranches very near the proposed locations for this Nuclear dumping and they are very scared about the potential hazards associated that this could have on the very fragile ecosystem in West Texas. They rely solely on their underground water resources. There are no other options for water if the aquifer is damaged or contaminated. And having heard opinions from many residents in the area the general reaction is that they do not want your waste imposed on them. Take it elsewhere. Put it in your own yard since you will be the one benefitting and keep it out of West Texas. The West Texas area is beautiful please protect it. I pray that the children in my family that live in this area will not be impacted by this. Are you aware that they have had earthquakes in this area in the past? Would the facilities leak if impacted by an earthquake? Would this also impact the tourism that the area relies on as well? Who wants to go pay for a hunt or vacation and stare at a unclear dumping site next door that was forced on them?

Thank you

J S
