The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry should be supported by a valid receipt or invoice. This ensures transparency and allows for easy verification of the data.

In the second section, the author details the various methods used to collect and analyze the data. This includes both manual and automated techniques. The goal is to ensure that the information gathered is both reliable and comprehensive.

The third part of the document focuses on the results of the analysis. It shows how the data points are correlated and how they relate to the overall objectives of the study. The findings are presented in a clear and concise manner, making it easy for the reader to understand the implications.

Finally, the document concludes with a summary of the key findings and a list of recommendations for future research. It suggests that further studies should be conducted to explore the long-term effects of the variables being studied.

The data collected over the course of the study shows a clear trend towards increasing efficiency. This is particularly evident in the areas of resource allocation and time management. The results indicate that the implemented changes have had a positive impact on the overall performance of the organization.

One of the most significant findings is the reduction in errors. This suggests that the new processes are more robust and less prone to mistakes. This is a crucial factor for any business looking to improve its operational reliability.

Another key observation is the increase in employee satisfaction. This is likely due to the more streamlined and organized nature of the new workflow. When employees can work more efficiently, they are generally more satisfied with their work environment.

The data also shows that the implementation of the new system was smoother than anticipated. This is a testament to the thorough planning and communication that went into the project. It serves as a model for other organizations looking to undertake similar initiatives.

Overall, the study demonstrates that a well-planned and executed change management process can lead to significant improvements in organizational performance. The findings provide valuable insights into the factors that contribute to a successful transition.

The final section of the document provides a detailed breakdown of the data. It includes several tables and charts that illustrate the trends and patterns observed during the study. These visual aids help to clarify the complex data and make it more accessible to the reader.

The tables show the specific values for each variable over time, allowing for a detailed comparison of the data points. The charts, on the other hand, provide a visual representation of the trends, making it easier to see the overall direction of the data.

The data indicates that the most significant improvements were seen in the first six months of the study. After this period, the performance levels began to stabilize, suggesting that the initial changes had been fully integrated into the organization's operations.

The study also identified some areas where further improvement is needed. For example, while overall efficiency has increased, there are still some bottlenecks in certain departments. Addressing these issues will be a key focus for future research.

In conclusion, the document provides a comprehensive overview of the study's findings and their implications. It offers a clear and detailed account of the research process, from the initial data collection to the final analysis and recommendations.

## NIAGARA MOHAWK POWER CORPORATION

NIAGARA  MOHAWKJAMES BARTLETT  
EXECUTIVE VICE PRESIDENT300 ERIE BOULEVARD WEST  
SYRACUSE, N.Y. 13202

April 22, 1980

Mr. Victor Stello, Director  
Office of Inspection and Enforcement  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Re: Nine Mile Point Unit #1  
Docket No. 50-220  
DPR-63

Dear Mr. Stello:

Recently some changes in Niagara Mohawk Power Corporation management have been made to provide for a more efficient operation.

Due to the recent retirement of Mr. Rudolph R. Schneider, the position of Vice President-Electric Production has been abolished. Effective March 1, 1980 Mr. Thomas E. Lempges was elected Vice President-Nuclear Generation. The immediate result is that all correspondence from the Office of Inspection and Enforcement should be sent to Mr. T. E. Lempges, c/o Miss Catherine R. Seibert.

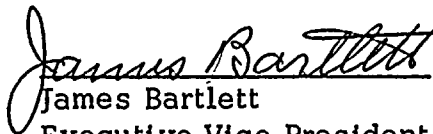

The exception to the above is that all correspondence pertaining to Security-related matters should be sent to Mr. Joseph J. Sunser, Manager System Security.

These organization changes will be carried out in a manner which will not impede our licensing efforts and will ensure our continued safe operation at Nine Mile Point Unit #1.

All correspondence addressed to the above management individuals should be mailed to Niagara Mohawk Power Corporation, 300 Erie Boulevard West, Syracuse, New York 13202.

Very truly yours,

NIAGARA MOHAWK POWER CORPORATION

  
James Bartlett  
Executive Vice President

MOOB  
S  
1/0
