June 30, 1981

Mr. Darrell G. Eisenhut, Director  
Division of Licensing  
Office of Nuclear Reactor Regulation  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Eisenhut:

Re: Nine Mile Point Unit 1  
Docket No. 50-220  
DPR-63

In our previous letters of December 17, 1980 and December 31, 1980, we committed to providing automatic isolation of the containment vent and purge valves on high radiation. This modification was in response to Item II.E.4.2 of NUREG 0737 and was to be performed by January 1, 1982. Associated Technical Specification changes reflecting this addition were to be submitted by June 30, 1981.

However, an assessment performed by the BWR Owners Group shows such an automatic isolation is not necessary. This modification will not appreciably alter the already low probability of a significant release of radioactivity through these lines. The assessment was submitted to you by Mr. T.J. Dente, Chairman BWR Owners Group in a letter dated June 29, 1981. Therefore, Niagara Mohawk does not plan to implement this modification or submit Technical Specification changes as previously indicated.

Very truly yours,

NIAGARA MOHAWK POWER CORPORATION
