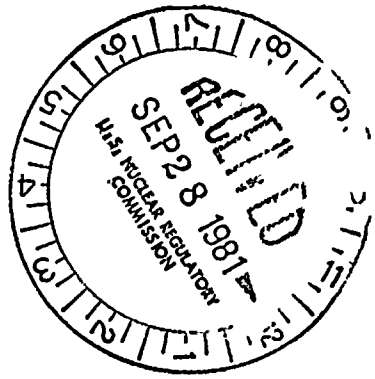
September 22, 1981



Mr. Darrell G. Eisenhut, Director
Division of Licensing
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Eisenhut:

Re: Nine Mile Point Unit 1
Docket No. 50-220
DPR-63

Our July 7, 1981 letter indicated we were evaluating alternate designs to the ones previously proposed for NUREG 0737 Items II.F.1.1 Noble Gas Monitor and II.F.1.2 Sampling and Analysis of Plant Effluents. As a result of this evaluation, Niagara Mohawk will install the Radioactive Gaseous Effluent Monitoring System designed and supplied by Science Applications, Inc. This system will perform a continuous on-line isotopic analysis of radioactive effluents including particulate, iodine and noble gases.

Based on the aforementioned, Niagara Mohawk will not be implementing the final design modifications for the noble gas monitor and iodine/particulate sampling described in our submittal of March 31, 1981 and December 31, 1980 respectively. The interim measures described in these submittals will continue to be implemented until the final modification is complete. The final modification is scheduled for completion by January 1, 1983.

Very truly yours,

NIAGARA MOHAWK POWER CORPORATION

Donald P. Dise
Vice President Engineering
