LIMITING CONDITION FOR OPERATION

SURVEILLANCE REQUIREMENT

- (2) Subsequent leakage rate tests shall be performed without preliminary leak detection surveys or leak repairs immediately prior to or during the test, at an initial pressure of approximately 22 psig.
- (3) Leak repairs, if necessary to permit integrated leakage rate testing, shall be preceded by local leakage measurements. The leakage rate difference, prior to and after repair when corrected to P_t shall be added to the final integrated leakage rate result.
- (4) Closure of the containment isolation valves for the purpose of the test shall be accomplished by the means provided for normal operation of the valves.
- (5) After the containment test conditions have stabilized, the test duration shall not be less than eight hours for integrated leak rate measurements. The test shall be extended for sufficient duration, to verify by a supplemental test method the accuracy of the integrated leak rate test results.
