Attention: Mr. Domenic B. Vassallo, Chief  
 Operating Reactors Branch No. 2  
 Division of Licensing  
 U.S. Nuclear Regulatory Commission  
 Washington, D.C. 20555

Re: Nine Mile Point Unit 1  
Docket No. 50-220  
DPR-63

Dear Mr. Vassallo:

Supplement 1 to NUREG 0737 provided the final requirements regarding meteorological data to support emergency response activities. The Supplement stated that changes to existing meteorological monitoring systems were unnecessary, pending historical reliability. As discussed in our April 15, 1983 letter, meteorological data is currently available in the Nine Mile Point Unit 1 control room, technical support center and emergency operations facility. Environmental Technical Specification 3.1.1 and past operating experience provide assurance of data for reliability.

Our June 30, 1981 letter indicated that backup meteorological instrumentation would be installed. That commitment was based on the requirements existing in Appendix II to NUREG 0654 in the proposed revision to Regulatory Guide 1.23 at that time. It is our understanding that Supplement 1 to NUREG 0737 supersedes these documents, thereby alleviating the requirements for backup instrumentation. Therefore, backup meteorological instrumentation will not be installed at the Nine Mile Point site.

Our commitments regarding meteorological dispersion modeling were also based on the requirements of Appendix II to NUREG 0654. Efforts were made to provide a model which, to the extent possible, was capable of complying with the criteria for Class B models described in Appendix II to NUREG 0654. This resulted in the project involving complex hardware and software design. Due to this complexity, several software problems currently remain unresolved. Although efforts to correct these problems are continuing an accurate schedule for final resolution cannot be provided at this time. Therefore, Niagara Mohawk will continue to use the interim system described in our April 1, 1982 letter until these problems are corrected.

Your office will be appropriately notified of any additional change in status.

Sincerely,

*T. E. Lempges*  
 T. E. Lempges

Final Report of the  
Task Force on  
Land Use Planning

Volume 1

The Task Force on Land Use Planning was established in 1971 by the Secretary of the Interior, Rogers Morton, in response to a request from the President's Council on Environmental Quality. The Task Force's mandate was to study the Federal Government's land use planning policies and procedures and to recommend ways to improve them. The Task Force's report, "Final Report of the Task Force on Land Use Planning," was published in 1974. This report is the first volume of the report and contains the following chapters:

Chapter 1: Introduction  
Chapter 2: The Federal Government's Land Use Planning Policies and Procedures  
Chapter 3: The Federal Government's Land Use Planning Policies and Procedures: A Review  
Chapter 4: The Federal Government's Land Use Planning Policies and Procedures: Recommendations

The report is organized into four main sections. The first section, "Introduction," provides an overview of the Task Force's mission and the scope of the report. The second section, "The Federal Government's Land Use Planning Policies and Procedures," describes the current policies and procedures. The third section, "The Federal Government's Land Use Planning Policies and Procedures: A Review," evaluates the current policies and procedures. The fourth section, "The Federal Government's Land Use Planning Policies and Procedures: Recommendations," provides recommendations for improving the policies and procedures.

For more information, contact the Bureau of Land Management, Washington, D.C. 20250.
