Mr. Darrell G. Eisenhut, Director
Division of Licensing
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Eisenhut:

Re: Nine Mile Point Unit 2
Docket No. 50-410

Below is the Nine Mile Point Unit 2 response to Generic Letter 84-11 dated April 19, 1984 concerning "Inspections of BWR Stainless Steel Piping." This response is based upon a Nine Mile Point Unit 2 review of the subject problem and a discussion with the Nuclear Regulatory Commission's Licensing Project Manager, Ms. M. Haughey.

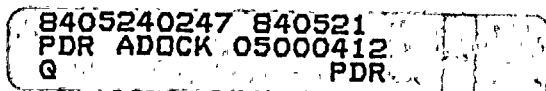

Niagara Mohawk submitted the Nine Mile Point Unit 2 Preservice and Inservice Inspection Plan to the Nuclear Regulatory Commission as part of Amendment 9 to the Nine Mile Point Unit 2 Final Safety Analysis Report dated March 30, 1984. This plan delineates the ASME Section XI inspection program for piping systems at Nine Mile Point Unit 2. The plan includes inspection requirements for piping systems that could be affected by intergranular stress corrosion. Further, Section 5.2.3.4.1 of the Final Safety Analysis Report describes measures to minimize intergranular stress corrosion cracking. These measures include the use of materials which are resistant to intergranular stress corrosion cracking.

Very truly yours,

C. V. Mangan

C. V. Mangan
Vice President
Nuclear Engineering & Licensing
