

UNITED STATES
NUCLEAR REGULATORY COMMISSION

In the Matter of)
NIAGARA MOHAWK POWER CORPORATION)
(Nine Mile Point Nuclear Station)
Unit No. 1)

APPLICATION FOR AMENDMENT
TO
OPERATING LICENSE

Pursuant to Section 50.90 of the regulations of the Nuclear Regulatory Commission, Niagara Mohawk Power Corporation, holder of Facility Operating License No. DPR-63, hereby requests that Section 6.5.2.8 of the Technical Specifications set forth in Appendix A to that License be amended. This proposed change has been reviewed by the Site Operations Review Committee and the Safety Review and Audit Board.

The proposed Technical Specifications change is set forth in Attachment A to this application. Supporting information, which demonstrates that the proposed changes will have no safety or environmental significance, is set forth in Attachment B. The proposed change would not authorize any change in the types of effluents or any change in the authorized power level of the facility. An analysis, which demonstrates that the proposed changes involve no significant hazards considerations pursuant to 10CFR50.92, is included as Attachment C.

Proposed Changes to Technical Specifications (Appendix A)

Proposed changes to Section 6.5.2.8 of the current Nine Mile Point Unit 1 technical specifications are enclosed herein. The affected pages have been retyped in their entirety with marginal markings indicating the proposed changes.

Note: Our applications for amendments to the Nine Mile Point Unit 1 Operating License dated January 31, 1984, February 1, 1984 and August 6, 1984 involved the same sections affected by this application.

These proposed changes are independent from the previously proposed changes. Therefore, no additional marginal indications other than those affected by this application are provided.

Supporting Information

Audits - Page 254

This proposed change is also administrative in nature. In Section 6.5.2.8.c, the word "all" is inappropriate and, therefore, being deleted. An audit involves a review of less than 100 percent, i.e. a sampling. Therefore, the use of the word "all" in connection with an audit is conflicting. This change is consistent with Revision 2 to the General Electric Boiling Water Reactor (BWR) Technical Specifications (NUREG-0123).

No Significant Hazards Considerations Analysis

The proposed technical specification changes to Section 6.5 Review and Audit of the Nine Mile Point Unit 1 Administrative Controls involves no significant hazard considerations. Therefore, the operation of the plant in accordance with the proposed amendment will not 1) involve a significant increase in the probability or consequences of an accident previously evaluated, 2) create the possibility of a new or different kind of accident from any accident previously evaluated or 3) involve a significant reduction in a margin of safety. This determination is based on the fact that the revisions are purely administrative. This determination corresponds with example (i) of the Sholly Rule published in the Federal Register on April 6, 1983 which involves a purely administrative change.
