RE: Nine Mile Point - Unit 2
Docket No. 50-410/84-30

Dear Mr. Starostecki:

Enclosed is an interim report in accordance with 10CFR50.55(e) for the problem concerning the use of a nonqualified breaker in a Quality Assurance Category I battery charger. This problem was reported by G. Griffith (Niagara Mohawk Licensing) to P. Russ of your staff on August 7, 1984.

Very truly yours,

C. V. Mangan

C. V. Mangan

1. The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that this is essential for the proper management of the organization's finances and for ensuring that all activities are properly documented.

2. The second part of the document outlines the various methods used to collect and analyze data. It describes how data is gathered from different sources and how it is then processed to identify trends and patterns. This section also discusses the importance of using reliable data sources and the need for regular updates to the data.

3. The third part of the document focuses on the results of the data analysis. It presents a series of charts and graphs that illustrate the findings of the study. These results show that there is a significant correlation between the variables being studied, and they provide a clear picture of the overall trends in the data.

4. The fourth part of the document discusses the implications of the findings. It explains how the results of the study can be used to inform decision-making and to guide the development of new policies and procedures. It also highlights the need for ongoing monitoring and evaluation to ensure that the organization remains effective and efficient.

5. The final part of the document provides a summary of the key findings and conclusions. It reiterates the importance of accurate record-keeping and the need for regular data analysis. It also offers some suggestions for further research and for the implementation of the findings.

NIAGARA MOHAWK POWER CORPORATION
NINE MILE POINT - UNIT 2
DOCKET NO. 50-410

Interim Report for a Problem Concerning the Use
of Nonqualified Breakers in Battery Charges
(55(e)-84-30)

Description of the Problem

An inspection of the Division III battery chargers 2BYS*CHGR2C1 and 2BYS*CHGR2C2 indicated that the dc circuit breakers actually provided were different than those shown on the bill of material. The vendor was required to provide qualified Class 1E circuit breakers manufactured by Westinghouse. Correct dc circuit breakers were identified on the bill of material, but the battery chargers supplied to the Nine Mile Point 2 site were equipped with nonqualified Square D dc circuit breakers.

The matter is still under investigation and a final report will be submitted by November 19, 1984.
