Re: Nine Mile Point Unit 1
Docket No. 50-220
DPR-63

Dear Mr. Vassallo:

Our July 31, 1984 letter provided information regarding on-line functional testing of scram pilot and backup scram valves in relation to the generic implications of the Salem Anticipated Transient Without Scram Events (Generic Letter 83-28). While our response stated that additional on-line functional testing of the backup scram valves was unwarranted, we committed to evaluate the feasibility of testing during refueling outages. As a result of our evaluation, we have decided to perform a qualitative test of the backup scram valves during each refueling outage. The test will involve the interruption of power to the valves and the monitoring of the upstream header pressure to ensure that the valves function properly. The first test is scheduled to be performed during our next refueling outage.

Sincerely,

NIAGARA MOHAWK POWER CORPORATION

C. V. Mangan
