Mr. A. Schwencer, Chief
Licensing Branch No. 2
Division of Licensing
Office of Nuclear Reactor Regulation
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr. Schwencer:

Re: Nine Mile Point Unit 2
Docket No. 50-410

As requested in Enclosure 11 to the NRC letter dated March 29, 1983, we have reviewed the loss of coolant accident and seismic analysis for the containment purge isolation valves. Enclosed for your information and review is the LOCA and seismic analysis report dated July 18, 1984 for Nine Mile Point Unit 2. To ensure the appropriate closure of the containment isolation valves for Nine Mile Point Unit 2 during LOCA conditions, the report recommendations regarding orientation and/or travel limits of the valves will be implemented for Nine Mile Point Unit 2. These changes will be implemented prior to fuel load.

To assist the NRC review, we have also included the nuclear seismic analysis report dated February 16, 1983 and the seismic function test plan dated July 8, 1983 and the report for the pneumatic operators dated July 18, 1983.

Regarding the seismic analysis for these valves, we are currently evaluating and have reported an identified potential concern in accordance with 10CFR50.55(e) for the valves. We will keep you advised of the results of our final disposition of the 10CFR50.55(e) report. Also, the additional information requested by Enclosure 11 will be provided by March 30, 1985.

Very truly yours,
