November 27, 1985
(NMP2L 0546)

Dr. Walter Butler, Chief
Licensing Branch No. 2
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Dr. Butler:

Re: Nine Mile Point Unit 2
Docket No. 50-410

This letter provides the additional information your staff requested pertaining to the content of the procedures that have been generated as a result of Safety Evaluation Report Confirmatory Issues 35 and 41. Niagara Mohawk letter NMP2L-0530 dated November 14, 1985 advised the NRC that the requested procedures were ready for onsite inspection by the NRC and requested closure of these items, however this letter was subsequently requested in lieu of that inspection.

Confirmatory Issue No. 35 - Procedures for filling fuel oil storage tanks:

NMPC has included in the plant Interim Operating Procedures provisions for filling the diesel generator fuel oil storage tanks through the diesel day tank connections located in the diesel generator building in the event such measures are necessary.

Confirmatory Issue No. 41 - Procedures for minimum loading of diesel generators:

NMPC has included in the plant Interim Operating Procedures provisions for loading the diesel generators to the manufacturer's minimum recommended levels. The procedure addresses the maximum time permitted for unloaded operation without engine degradation.

The Interim Operating Procedures mentioned above will become Operating Procedures for the diesel generators before Unit 2 loads fuel. Your timely closure of Confirmatory Issues 35 and 41 will be appreciated.

Very truly yours,

C. V. Mangar
C. V. Mangar
