Supporting Information and No Significant Hazards Considerations Analysis

The proposed amendment to Section 3.4.5 of the Technical Specifications involves the addition of the word "secondary" to more accurately describe which containment is being referenced. This change does not represent a change in procedure or intent of this requirement. This proposed amendment is the result of a continuing effort to clarify nomenclature in the existing Technical Specifications.

10CFR50.91 requires that at the time a licensee requests an amendment, it must provide to the Commission its analysis, using the standards in Section 50.92 about the issue of no significant hazards consideration. Therefore, in accordance with 10CFR50.91 and 10CFR50.92, the following analysis has been performed:

The proposed amendment in accordance with the operation of Nine Mile Point Unit 1 will not involve a significant increase in the probability or consequences of an accident previously evaluated.

This change will improve the accuracy and clarity of our Technical Specifications. As a result, the overall performance of Nine Mile Point Unit 1 will be improved.

The proposed amendment in accordance with the operation of Nine Mile Point Unit 1 will not create the possibility of a new or different kind of accident from any accident previously evaluated.

This proposed amendment represents a change in nomenclature only. It is not a new procedure, but merely clarifies an existing one.

The proposed amendment in accordance with the operation of Nine Mile Point Unit 1 will not involve a significant reduction in margin of safety.

The addition of the word "secondary" will help clarify the conditions in which the control room air treatment system is to be operable. This change will not adversely affect the operation of Nine Mile Point Unit 1 but will instead improve the accuracy of the existing Technical Specifications.
