Re: Nine Mile Point Unit 1
Docket No. 50-220
DPR-63

Dear Dr. Murley:

Our letter of January 7, 1985 provided responses to Inspection Report No. 84-15 conducted by Mr. K. Manoly of your staff. In that letter we indicated that we were embarking on an Engineering Assurance Program which was to be implemented by December 31, 1985. This program consisted of the following major tasks:

- A. System Descriptions
- B. Design Criteria
- C. Standard Specifications
- D. Procedure Revision and Development

This letter is to provide a current status of that program. All of the original scope of work has been completed except for three (3) safety related system descriptions, one (1) design criteria, one (1) standard specification and the organizational procedure. All of these have been drafted. The standard specification, which involves safety related painting, is not required at this time. We are also actively involved in reclassifying painting as nonsafety related.

PDR ADOCK 05000220
Q PDR

The current schedule for completion of these items is by the end of the first quarter of 1986 except for cable criteria which is the end of the third quarter 1986. In addition, 14 non-safety related system descriptions are being developed, which Niagara Mohawk did not consider to be a part of the original scope. Those will be completed by the end of 1986.

Since the Engineering Assurance Program is a living program, it has been expanded from the original scope to include several other issues, many of which have been completed at this time.

Sincerely,

NIAGARA MOHAWK POWER CORPORATION

C. V. Mangani
Senior Vice President
