

April 15, 1986

Docket No. 50-220

Niagara Mohawk Power Corporation  
Attn: Mr. C. V. Mangan  
Senior Vice President  
c/o Miss Catherine R. Seibert  
300 Erie Boulevard West  
Syracuse, New York 13202

Dear Mr. Mangan:

SUBJECT: INTEGRATED LEAK RATE TESTING (TAC 61084)

Re: Nine Mile Point Nuclear Station, Unit No. 1

In a letter dated April 2, 1986, you stated that you would not be performing Type A Integrated Leak Rate Tests during the shutdown for the 10-year plant inservice inspections (ISI) which coincides with the 1986 Refuel and Maintenance outage. You indicated that a set of three Type A tests were performed during the original 10-year service period (1974-1984) and that the third test was conducted during the scheduled 1984 plant inservice inspection shutdown, as required by Appendix J to 10 CFR Part 50. The 10-year ISI program was extended through 1986 due to the lengthy outage for replacement of the recirculation piping in 1982-1983, thereby extending the inservice inspection shutdown to 1986. However, the third Type A test did coincide with the previously scheduled ISI shutdown and is therefore acceptable.

Sincerely,

ORIGINAL SIGNED BY

John A. Zwolinski, Director  
BWR Project Directorate #1  
Division of BWR Licensing
