In the Matter of
Niagara Mohawk Power Corporation
(Nine Mile Point, Unit 2)
Docket Nos. 50-410

Dear Dr. Murley:

On behalf of Niagara Mohawk Power Corporation and the other owners of Nine Mile Point Unit 2, I am pleased to inform you that the design, construction and preoperational testing required for fuel loading of the unit has been substantially completed and the unit will be ready to load fuel by October 29, 1986. On the basis set forth below, I hereby request that you complete all steps necessary for the issuance of an operating license to permit fuel loading and operation at power levels up to five percent of rated power:

1. The plant has been constructed in accordance with the Application, including the Final Safety Analysis Report and pertinent licensing submittals, the Technical Specifications to be issued with the low power license and the Staff's Safety Evaluation Report. A certification to that effect explaining the basis for this conclusion has been submitted to the NRC.
2. Requests for exemptions, alternate requirements, test deferrals, and other relief necessary to permit fuel loading have been submitted to the NRC.
3. The systems required for fuel load have been completed and transferred to the Niagara Mohawk operating staff. The associated preoperational tests required for fuel load have been completed and the test results reviewed. Any remaining test exceptions and punch list items will be closed before fuel load or reviewed to assure no effect on safe operation of the facility.
4. Surveillance tests required for fuel loading will be successfully performed prior to the commencement of fuel loading.

RECEIVED-REGION 1
1986 OCT 29 PM 1:02

5. Sufficient personnel have been licensed by the NRC pursuant to 10 C.F.R. Part 55 and are on shift in accordance with the Technical Specifications. Other personnel at the Station and in support roles, including Station and Corporate management, are prepared to operate the plant in accordance with the Application and Technical Specifications.
6. The security and emergency plans described in the Application are being implemented.
7. Procedures necessary for Operational Conditions Modes 4 and 5 have been identified, reviewed and approved and are effective. The remainder of the procedures will be approved and made effective as required.
8. Either an interim or final response to matters identified pursuant to all 10 C.F.R. Section 50.55(e) matters has been provided to the NRC.
9. Responses to identified non-compliances identified by the NRC have been provided to the NRC.
10. All safety related open items identified by the Quality First program have been reviewed and found not to impact fuel loading.
11. All Part 21 reports have been closed out.
12. The NRC Resident and Regional Inspectors and Region I management have been provided the results of preoperational tests for their review and are being kept current with regard to the status of the facility.

To the best of my knowledge, the foregoing paragraphs address the major activities which bear on issuance of the Nine Mile Point Unit 2 operating license. Accordingly, Niagara Mohawk respectfully requests that you take all actions necessary for issuance of the operating license by October 29, 1986.

Very truly yours,

C. V. Mangán
