Re: Nine Mile Point Unit 2  
Docket No. 50-410

Gentlemen:

Based on Mr. T. J. Perkins' telephone conversation with Mr. Larry Briggs of the Nuclear Regulatory Commission, it was agreed that a revised response to Inspection Report No. 50-410/86-33 would be submitted as follows:

Response:

In the Final Safety Analysis Report, Niagara Mohawk committed to have the Joint Test Group review and approve the results of Preliminary Tests required to satisfy any Acceptance Criteria of a Preoperational Test Procedure. Likewise, Niagara Mohawk committed to meet the requirement of Regulatory Guide 1.108, Revision 1, 1977, "Periodic Testing of Diesel Generator Units Used as Onsite Electric Power Systems at Nuclear Power Plants."

The reliability test of 69 consecutive starts per Regulatory Guide 1.108 was performed as a Preliminary Test. Although this Preliminary Test was performed during the Preoperational Test Program, the results of the Preliminary Test were not made a requirement to satisfy the Acceptance Criteria of the Preoperational Test Procedure for the emergency diesel generators. In retrospect, the reliability testing should have been made a part of the Preoperational Test Program, including the Joint Test Group review of the results.
