LICENSEE: Niagara Mohawk Power Corporation

FACILITY: Nine Mile Point Nuclear Power Station, Unit 2 (NMP-2)

SUBJECT: SUMMARY OF MEETING HELD ON JUNE 10, 1987 WITH NIAGARA MOHAWK POWER CORPORATION (NMPC)

The meeting was held in Bethesda, Maryland, on June 10, 1987. provides a list of attendees.

The purpose of this meeting was to review the May 18, 1987 submittal by NMPC which forwarded a failure mode and effects analysis (FMEA) for the reactor protection system (RPS). NMPC, in a follow-on review of the power generation control complex (PGCC), discovered that the RPS contained some class non 1E electrical components in or interfacing with class 1E systems. The FMEA would provide justification for operation of the plant until the RPS could be upgraded with class 1E components.

The NRC staff reviewed the FMEA with the licensee and discussed areas where the FMEA should provide more information.

The staff's position was that although the FMEA would provide justification for operation of NMP-2, the licensee should provide a commitment to replace all class non 1E components or provide appropriate documentation for the existing components.

The licensee stated that a commitment and revised FMEA would be provided the following week.

Joseph D. Neighbors, Project Manager  
Project Directorate I-1  
Division of Reactor Projects, I/II

Enclosure:  
As stated
