Docket No. 50-220

27 JUL 1987

Niagara Mohawk Power Corporation  
ATTN: Mr. C. V. Mangan  
Senior Vice President  
301 Plainfield Road  
Syracuse, New York 13212

Gentlemen:

Subject: Systematic Assessment of Licensee Performance (SALP); Report  
No. 50-220/85-98 - Amended Report

This refers to the assessment we conducted of the activities at the Nine Mile Point Nuclear Station, Unit 1, for the period June 1, 1985 through October 31, 1986. This report was discussed with you at a meeting on March 26, 1987 at your Training Center in Scriba, New York. The list of meeting attendees is attached as Enclosure 1. In response to your written comments (Enclosure 2) on our report, changes have been made to the SALP to reflect this additional information. These changes are noted in the enclosed amended report (Enclosure 3), as well as, additional editorial changes made by my staff.

Our overall assessment of your facility operation concludes that increased management attention is needed in several functional areas. Numerous weaknesses were identified during this assessment period, particularly during the 1986 refueling outage. Declining performance in several functional areas at Unit 1 appeared to have been caused by the strain on management from the pressing demands for the completion of construction on Unit 2. Your letter of April 22, 1987 addressed the corrective actions taken and planned regarding the Maintenance and Assurance of Quality functional areas. We plan to pay particular attention to your progress in these areas.

No reply to this letter is required. Your actions in response to the NRC Systematic Assessment of Licensee Performance will be reviewed during future inspections of your licensed facility.

We appreciate your cooperation.

Sincerely,

Original Signed By  
WILLIAM T. RUSSELL  
William T. Russell  
Regional Administrator
