Mr. Charles V. Mangan
Senior Vice President
Niagara Mohawk Power Corporation
301 Plainfield Road
Syracuse, New York 13212

Dear Mr. Mangan:

SUBJECT: CHANGE IN THE SURVEILLANCE REQUIREMENTS FOR REACTOR VESSEL
MATERIAL SAMPLES (TAC 54210)

By letter dated May 2, 1983, Niagara Mohawk Power Corporation proposed changes to Section 4.2.2, Minimum Reactor Vessel Temperature for Pressurization, of the Appendix A Technical Specifications. The proposed amendment reflected a change in the surveillance requirements for the Nine Mile Point Unit 1 reactor vessel material samples because one of the sample capsules had been inadvertently misplaced during a previous refueling outage.

During the Spring 1986 refueling outage, additional surveillance capsules and material samples were installed in the reactor vessel. Since the current surveillance requirements can be met, the request for amendment is no longer required. By letter dated January 29, 1986, Niagara Mohawk withdrew the May 2, 1983 request for amendment.

This closes out the staff's action regarding this submittal. A copy of the enclosed Notice of Withdrawal of application for amendment is being forwarded to the Federal Register for publication.

Sincerely,

Robert A. Capra, Acting Director
Project Directorate I-1
Division of Reactor Projects, I/II
