

NINE MILE POINT NUCLEAR STATION / P.O. BOX 32 LYCOMING, NEW YORK 13093 / TELEPHONE (315) 343-2110

July 12, 1989

United States Nuclear Regulatory Commission
Attention: Document Control Desk
Washington, DC 20555

RE: Docket 50-220
Special Report

Dear Sir:

The Niagara Mohawk Power Corporation (NMPC) submits the following Special Report to address a fire door that has been out of service for greater than fourteen (14) days.

This event occurred during the current outage.

This event requires that a thirty (30) day Special Report be submitted in accordance with the Nine Mile Point Unit 1 (NMP1) Technical Specifications (TS), Sections 3.6.10.1 and 6.9.2.b.

This report satisfies these reporting requirements.

EXECUTIVE SUMMARY

For this event, NMPC has taken the immediate corrective action of establishing, within one hour, a fire watch patrol as required by NMP1 TS.

The fire watch patrols will remain in effect until the required repairs or corrective actions are completed.

EVENT

On June 16, 1989, an Occurrence Report (OR) was initiated to report that fire door D-166 was non-functional beyond the Technical Specification (TS) time limit. Door D-166 is on the 250' elevation of the Turbine Building providing access to the condenser area.

Door D-166 was declared non-functional as a result of surveillance testing when it would not close under its own power due to a failed clock spring.

Work Request (WR) 151339 was initiated to repair fire door D-166 and is on hold awaiting parts.
