Re: Nine Mile Point Unit 1
Docket No. 50-220
DPR-63
TAC No. 71823

Gentlemen:

On December 27, 1988 Niagara Mohawk submitted a proposed Technical Specification Change (NMP1L 0337) regarding the scram discharge volume. The attached information is in response to review by the Nuclear Regulatory Commission Staff and supplements our December 27, 1988 Technical Specification change request.

As requested by the Staff, attached is a revised Page 119 which restores the word "maximum" that was inadvertently removed from the "maximum operating time" column heading. Page 119 also incorporates those changes issued in the Commission's April 10, 1989 Correction Letter issued in response to our letter dated February 13, 1989. Finally, Attachment B, Supporting Information and No Significant Hazards Consideration Analysis, enclosed with letter NMP1L 0377 has been revised to provide a more detailed explanation for changes made under column heading "Initiating Signals".

Very truly yours,

NIAGARA MOHAWK POWER CORPORATION

C. D. Terry
