SUBJECT: SUPPLEMENTAL RESPONSE TO GENERIC LETTER (GL) 94-03, "INTERGRANULAR STRESS CORROSION CRACKING OF CORE SHROUDS IN BOILING WATER REACTORS," FOR NINE MILE POINT NUCLEAR STATION, UNIT NO. 1 (NMP-1) (TAC NO. M90102)

Dear Mr. Sylvia:

By letter dated August 23, 1994, Niagara Mohawk Power Corporation (NMPC) responded to GL 94-03 for NMP-1. Additional information was provided in NMPC's September 26, 1994, letter which was submitted in response to our September 16, 1994, request for additional information.

NMPC's response to GL 94-03 recommended that the results of the core shroud inspection, scheduled for performance at Oyster Creek during October 1994, be used to assess the uncertainty in estimating the potential shroud cracking depth for the H1 through H7 welds. Inspection of the Oyster Creek core shroud has now been completed. Therefore, we request that NMPC supplement its response to GL 94-03 for NMP-1 based on the results of the Oyster Creek core shroud inspection.

During a telephone conference call with the NRC staff on October 19, 1994, Mr. Carl Terry of your staff stated that NMPC's supplemental response to GL 94-03 for NMP-1 would be ready for submittal to the NRC by November 7, 1994. Mr. Terry also stated that NMPC representatives would be available to brief the NRC staff on this supplemental response via another telephone conference call on November 1 or 2, 1994. We request that NMPC's supplemental response to GL 94-03, based on the results of the inspection of the Oyster Creek core shroud, be submitted to the NRC as soon as possible, preferably by November 4, 1994, but no later than November 7, 1994. We also accept Mr. Terry's offer to brief the NRC staff on this supplemental response. I will contact your staff to arrange the telephone conference call.
