*Subject: NRC Generic Letter 96-06, "Assurance of Equipment Operability and Containment Integrity During Design-Basis Accident Conditions"*

Gentlemen:

On September 30, 1996, the Commission issued NRC Generic Letter 96-06, "Assurance of Equipment Operability and Containment," to:

- (1) notify addressees about safety-significant issues that could affect containment integrity and equipment operability during accident conditions,
- (2) request that all addressees submit certain information relative to the issues that have been identified and implement actions as appropriate to address these issues, and
- (3) require that all addressees submit a written response to the NRC relative to implementation of the requested actions.

NMP1 and NMP2 provided the requested 30-day written response in Niagara Mohawk's October 29, 1996, letter (NMP1L 1149). The requested 120-day written response detailing the additional actions that have been taken to address this issue was due on January 28, 1997.

Niagara Mohawk has not yet completed the verification process associated with its 120 day response to Generic Letter 96-06. Operability determinations, where needed, have been completed in accordance with Generic Letter 91-18 and station procedures. Affected

penetrations or components have been determined to be operable. Niagara Mohawk intends to complete its verification process and submit the requested information by February 7, 1997.

Sincerely,

Martin J. McCormick Jr.  
Vice President - Nuclear Engineering
