RE: Nine Mile Point Unit 2
Docket No. 50-410
NPF-69

Subject: LER 97-16

Gentlemen:

Corrective action 2 of LER 97-16, "Missed Technical Specification Surveillance Requirement 4.3.4.1.2 for ATWS-RPT Trip of LFMG" committed to revise the Logic System Functional Test (LSFT) procedure for the Anticipated Transient Without Scram - Recirculation Pump Trip (ATWS-RPT) prior to refueling outage number 6. This letter is to change that commitment to prior to use of the procedure. The LSFT of the ATWS-RPT is scheduled to be completed by May 31, 1998.

The reason for this delay is to incorporate changes associated with the Power Range Neutron Monitoring (PRNM) system into the LSFT procedure for the ATWS-RPT and ensure the appropriate technical and administrative reviews for all changes are completed. The PRNM is being installed during the refueling outage and will affect the LSFT procedure for the ATWS-RPT. Therefore, additional time is required to assure that the procedure incorporates all required changes. As noted, the procedure will be revised prior to use.

Very truly yours,

John T. Conway
Vice President Nuclear Generation
