NIAGARA MOHAWK POWER CORPORATION

NINE MILE POINT NUCLEAR STATION UNIT #2

SUMMARY OF OPERATING EXPERIENCE

Nine Mile Point Unit Two operated with a capacity factor (MDC) of 99.99% and an availability factor of 100.00% for the month of September 1999.

On September 25, 1999 at 1925 hours, a planned down power to 55% of rated core thermal power commenced to rotate in-service feedwater pumps. A control rod sequence exchange was coordinated with the power reduction. Several hold points during the power reduction allowed maintenance activities such as Turbine Stop and Control Valve testing and Recirculation System Hydraulic Power Unit troubleshooting and repair to be performed. When the unit reached 55% of rated core thermal power, the feedwater pumps were rotated and power ascension commenced. On September 27, 1999 at 0426 hours the plant returned to 100% of rated core thermal power.

There were no challenges to the safety relief valves during this period.
