General Comment

As a resident of Texas, I would like to record my opposition to the transportation and storage of highly radioactive waste in Texas. The proposed high-level radioactive waste storage in Andrews County, Texas is not needed at this time because the waste from commercial reactors should be maximized at reactor sites. It would make much more sense to deal with the incredibly caustic, toxic and long life span of these waste products by securing it in smaller amounts at the seventy-four nuclear power sites around the country rather than at one large site that is not currently contaminated. These sites are already a threat to the environments and communities surrounding them and have been since originally developed. Why add more injury to our nation's environment and potential water, land, air contaminations by creating more waste depositories? Let's contain them where they are and stop producing more of this incredibly dangerous waste that is far from "clean energy." In a time when the EPA is being dismantled, this is even more dangerous a proposition as the rules and regulations to protect the residents of Texas and those all along the travel routes will not be properly protected or defended under the current administration. This adds even greater risk and threat to human health and life. Nuclear power and the by-products of it are a detriment to society and should be put to a stop altogether.
