## General Comment

There are many reasons why it is a very dangerous idea to bring high level liquid nuclear waste from Chalk River, Ontario to Savannah, Georgia. When we have the capabilities to solidify this waste it would be prudent to do so. If there were to be one incident, whether human error or terrorism, a spill could be catastrophic in regards to the great lakes and surrounding area. Clearly, no one wants this waste and we need to stop building and subsidizing nuclear facilities. For now, we need to wisely and safely deal with the huge amount of waste from our military and energy sectors. Please do not do what is expedient but what may be more expensive but ensures the safety and protection of the American and Canadian people.
