**Subject:** [External\_Sender] Docket ID NRC=2016-023

To the Nuclear Regulatory Commission:

Waste Control Specialists' (WCS) application to store tons of irradiated nuclear fuel and high-level radioactive waste from nuclear reactors around the country in Andrews County, Texas, will cause thousands of unnecessary nuclear waste shipments across the US.

NOT doing this is a no-brainer. There are enough problems with government control of nuclear waste. Using a company with a profit motive for cutting safety corners is just asking for dreadful disaster.

Risks of Transporting Nuclear Waste:

As you prepare an Environmental Impact Statement (EIS) of WCS's nuclear waste storage application, I urge you to include the risks of transporting toxic waste on our country's highways, railways, and waterways.

The EIS for Waste Control Specialists' license application should include a designation of transportation routes and the array of potential impacts of accidents or malicious attacks that could occur along those routes.

If the license is approved, deadly waste would be transported through communities, farmland, sensitive natural areas, and watersheds throughout the country for 24 years.

The public comment period should be extended for 90 more days to notify parties along all these potential routes and enable them to comment.

Risks to Local Groundwater:

The EIS should independently review the risk of groundwater contamination at the site, especially since the entire Texas Commission on Environmental Quality Radioactive Materials Division recommended denying a license for "low-level" radioactive waste at the Waste Control Specialists site due to the proximity of groundwater.

Risks of Accident:

The EIS should consider potential impacts from accidents or radioactive waste-related acts of malice along transport routes and at the site, including impacts to people, land and water.

In-depth research should examine radiation monitoring and cumulative impacts of multiple facilities near the WCS site, site security, engineering adequacy of the storage pad and seismic stresses, and the adequacy of the crane that would move radioactive waste.

Local Community Does Not Consent:

This is unacceptable! The local community has not consented to becoming a national radioactive waste dumping ground.

They should not have to risk contamination of our land, aquifers or air or the health of their babies, children, plants, wildlife, livestock, and themselves. Heck, it's not a risk. It's a certainty.

Risks of Temporary Site Becoming Permanent:

The EIS should address the impacts of "interim storage" becoming dangerous permanent de facto disposal, and the possibility that the waste might never be disposed of in a scientifically viable geologic repository using a reliable isolation system.

With political pressure gone, the waste would likely never move again.

These factors - when included in your review – make the decision to reject WCS's application clear.

Sincerely,

Sarah McKee
